

# Mechanically Jointed Rodless Cylinder *Series MY1*

**Five guide models allow a wide range of selections**

# Mechanically Jointed Rodless Cylinder Series MY1

## Basic Type

### Series MY1B

Can be combined with a variety of guides to accommodate conditions. Simple design without guide facilitates space savings.

#### Basic type

Wide variations from  
Ø 10 to Ø 100

## Slide Bearing Type

### Series MY1M

Integral guide allows use in a wide range of conveyor systems.

#### Medium load

Simple guide  
type allows direct  
mounting of  
work pieces.

## Cam Follower Guide type

### Series MY1C

Makes smooth operation possible even with an off-set load.

#### Cam follower type

Moment resistance,  
high accuracy  
and long strokes

## High Precision Guide type

### Series MY1H

Small and medium sizes Ø 10 to Ø 40 are ideal for pick & place.

#### High precision type

Uses a linear  
guide to achieve  
high repeatability

## High Rigidity High Precision Guide Type

### Series MY1HT

High load, high moment and high precision  
Ideal for transfer and pick & place of high load work pieces

#### High precision Twin guide type

Higher load  
work pieces  
can be  
accommodated  
by using two  
linear guides.

## Stroke availability

Strokes are selectable in  
1mm units.

## Stroke adjusting unit

Stroke Adjusting is possible  
on one side or on both sides.

- Adjusting bolt
- Low load shock absorber + Adjusting bolt (L unit)
- High load shock absorber + Adjusting bolt (H unit)

## Interchangeability

The bodies and work piece  
mountings are interchangeable  
between series MY1M and MY1C.

## Centralised piping

Piping ports are  
concentrated on one side.

## Side support

Prevents cylinder tube  
deflection in long strokes.

## Minimum size

### Basic type MY1B

- Even when equipped  
with a floating  
bracket, the height is  
only 28.5 mm.

28.5

## Series variations

Series

Guide

MY1B

MY1M

MY1C

MY1H

MY1HT

Size of  $\varnothing 10$  introduced to series MY1B/MY1H.

Height **27 mm**

High precision guide type **MY1H10**

- Stroke adjusting unit can be mounted
- Centralised piping type (standard)
- The stroke adjusting unit (H unit) does not protrude above the table height.

	Piping type	Bore size [mm]									Air cushion	Stroke adjusting unit	Side support	Floating bracket	End lock	Order made
		10	16	20	25	32	40	50	63	80	100					
Basic	Centralised piping	●	●	●	●	●	●	●	●	●	●	●	●	●	●	Intermediate strokes
Slide bearing	Standard piping	●	●	●	●	●	●	●	●	●	●	●	●	●	●	Long strokes
Cam follower guide		●	●	●	●	●	●	●	●	●	●	●	●	●	●	Helical insert threads
High precision guide		●	●	●	●	●	●	●	●	●	●	●	●	●	●	Dust seal band
High rigidity high precision guide		●	●	●	●	●	●	●	●	●	●	●	●	●	●	NBR lining
		●	●	●	●	●	●	●	●	●	●	●	●	●	●	Holder mounting bracket

Note 1)  $\varnothing 10$  is available with central piping only. Note 2)  $\varnothing 10$  is available with rubber bumper only.

Uses two linear guides.  
Max. load weight 320kg ( $\varnothing 63$ )

High rigidity/High precision guide type **MY1HT50, 63**

Extremely easy to maintain

- The cylinder can be replaced without disturbing the work piece
- Eyebolt mounting threads are standard for convenient installation

Using eyebolts

End lock type introduced to series MY1H.

Lock pin  
Allows fine stroke control

- Dimensions same as standard
- Can be locked on one side or on both sides

# Series MY1 Model Selection

Following are the steps for selecting the most suitable Series MY1B to your application.

## Standards for Tentative Model Selection

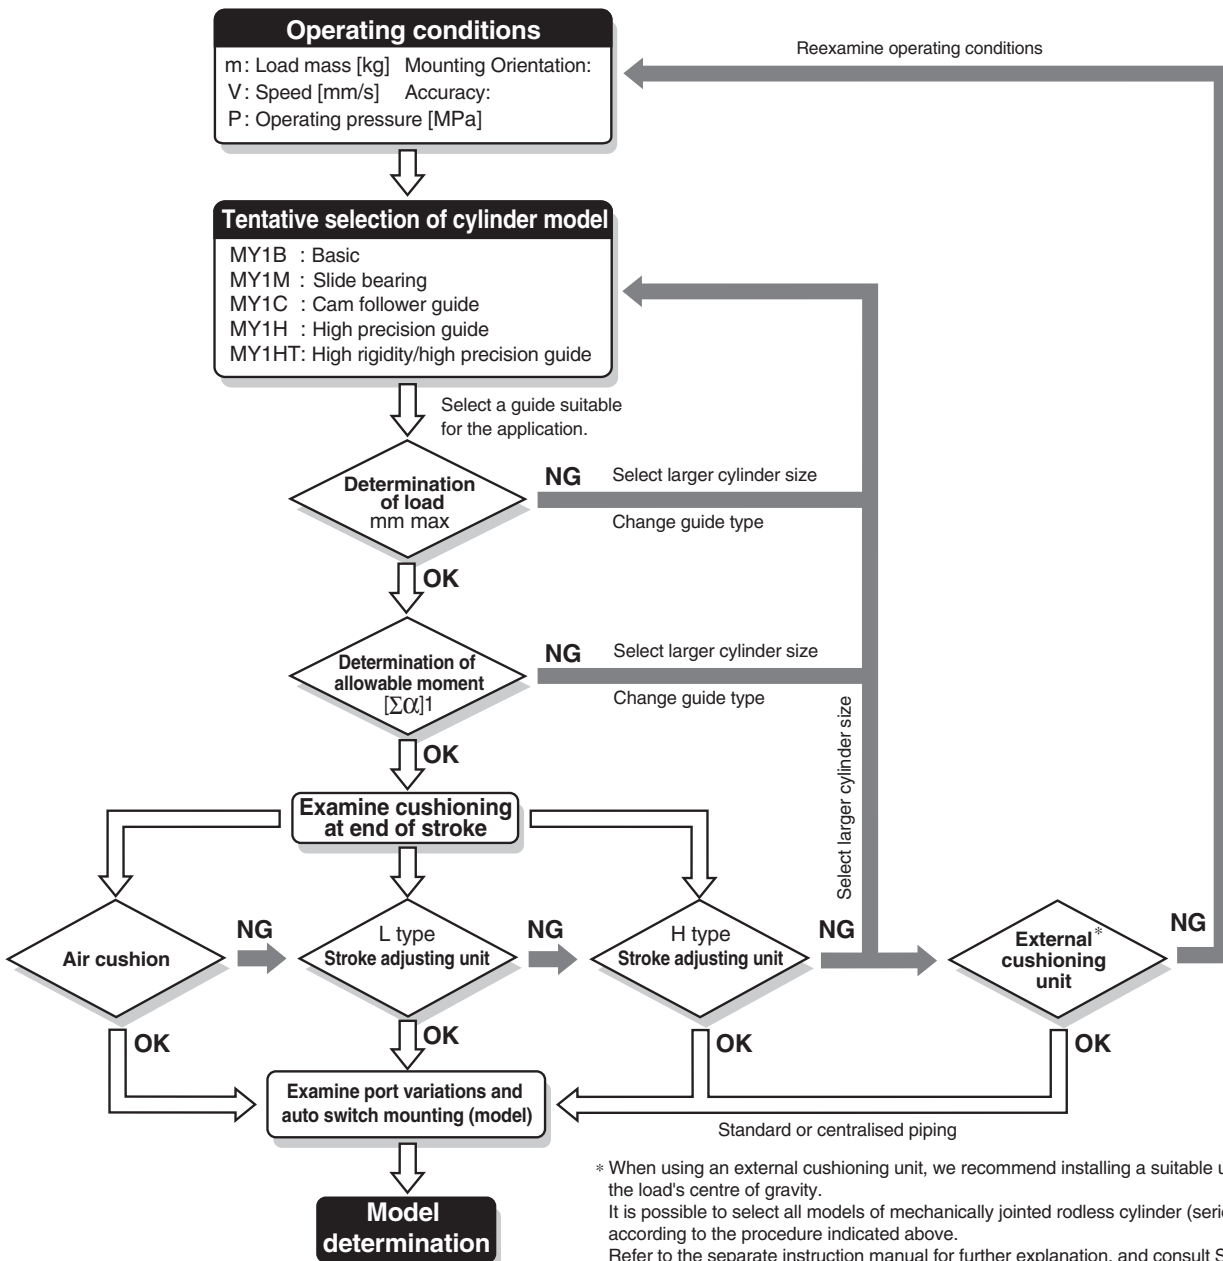

Cylinder model	Guide type	Standards for guide selection	Graphs for related allowable values
<b>MY1B</b>	<b>Basic</b>	Guaranteed accuracy not required, generally combined with separate guide	Refer to page 10
<b>MY1M</b>	<b>Slide bearing</b>	Slide table accuracy approx. 0.12 mm <sup>Note 2)</sup>	Refer to page 34
<b>MY1C</b>	<b>Cam follower guide</b>	Slide table accuracy approx. 0.05 mm <sup>Note 2)</sup>	Refer to page 54
<b>MY1H</b>	<b>High precision guide</b>	Slide table accuracy of 0.05 mm or less required <sup>Note 2)</sup>	Refer to page 74
<b>MY1HT</b>	<b>High rigidity/high precision guide</b>	Slide table accuracy of 0.05 mm or less required <sup>Note 2)</sup>	Refer to page 96

Note 1) Use as a standard when making selections regarding guide accuracy. Consult SMC when guaranteed accuracy is required for MY1C/MY1H.

Note 2) Accuracy indicates displacement of the table (at stroke end) when 50 % of the allowable moment shown in the catalogue is applied. (reference value)

## Selection Flow Chart

\* When using an external cushioning unit, we recommend installing a suitable unit near the load's centre of gravity.  
It is possible to select all models of mechanically jointed rodless cylinder (series MY1□) according to the procedure indicated above.  
Refer to the separate instruction manual for further explanation, and consult SMC regarding any questions.

Types of Moment Applied to Rodless Cylinders

Multiple moments may be generated depending on the mounting orientation, load and position of the centre of gravity.

Coordinates and moments

Static moment

**Horizontal mounting**

**Ceiling mounting**

**Wall mounting**

**Vertical mounting**

Mounting orientation		Horizontal	Ceiling	Wall	Vertical
Static load m		m <sub>1</sub>	m <sub>2</sub>	m <sub>3</sub>	m <sub>4</sub> <small>Note)</small>
Static moment	M <sub>1</sub>	m <sub>1</sub> x g x X	m <sub>2</sub> x g x X	—	m <sub>4</sub> x g x Z
	M <sub>2</sub>	m <sub>1</sub> x g x Y	m <sub>2</sub> x g x Y	m <sub>3</sub> x g x Z	—
	M <sub>3</sub>	—	—	m <sub>3</sub> x g x X	m <sub>4</sub> x g x Y

Note) m<sub>4</sub> is a mass movable by thrust. Use 0.3 to 0.7 times the thrust (differs depending on the operating speed) as a guide for actual use.

Dynamic moment

Mounting orientation	Horizontal	Ceiling	Wall	Vertical
Dynamic load FE	$\frac{1.4}{100} \times \upsilon_a \times m_n \times g$			
Dynamic moment	M <sub>1:E</sub>	$\frac{1}{3} \times FE \times Z$		
	M <sub>2:E</sub>	Dynamic moment M <sub>2:E</sub> does not occur.		
	M <sub>3:E</sub>	$\frac{1}{3} \times FE \times Y$		

Note) Regardless of the mounting orientation, dynamic moment is calculated with the formulae above.

## Calculation of Guide Load Factor

### 1 Operating conditions

Operating cylinder ..... MY1H40-500

Average operating speed  $v_a$  ... 300 mm/s

Mounting orientation ..... Wall mounting

#### Mounting orientation

Refer to the pages above for actual examples of calculation for each orientation.

### 2 Load blocking

#### Work piece mass and centre of gravity

Work piece no. $W_n$	Mass $m_n$	Center of gravity		
		X-axis $X_n$	Y-axis $Y_n$	Z-axis $Z_n$
<b>Wa</b>	0.88 kg	65 mm	0 mm	5 mm
<b>Wb</b>	4.35 kg	150 mm	0 mm	42.5 mm
<b>Wc</b>	0.795 kg	150 mm	111 mm	42.5 mm
<b>Wd</b>	0.5 kg	150 mm	210 mm	42.5 mm

$n = a, b, c, d$

### 3 Calculation of composite centre of gravity

$$m_3 = \sum m_n$$

$$= 0.88 + 4.35 + 0.795 + 0.5 = \mathbf{6.525 \text{ kg}}$$

$$X = \frac{1}{m_3} \times \sum (m_n \times X_n)$$

$$= \frac{1}{6.525} (0.88 \times 65 + 4.35 \times 150 + 0.795 \times 150 + 0.5 \times 150) = \mathbf{138.5 \text{ mm}}$$

$$Y = \frac{1}{m_3} \times \sum (m_n \times Y_n)$$

$$= \frac{1}{6.525} (0.88 \times 0 + 4.35 \times 0 + 0.795 \times 111 + 0.5 \times 210) = \mathbf{29.6 \text{ mm}}$$

$$Z = \frac{1}{m_3} \times \sum (m_n \times Z_n)$$

$$= \frac{1}{6.525} (0.88 \times 5 + 4.35 \times 42.5 + 0.795 \times 42.5 + 0.5 \times 42.5) = \mathbf{37.4 \text{ mm}}$$

### 4 Calculation of load factor for static load

$m_3$ : Mass

$m_3$  max (from 1 of graph MY1H/ $m_3$ ) = 50 (kg) .....

$$\text{Load factor } \alpha_1 = m_3 / m_3 \text{ max} = 6.525 / 50 = \mathbf{0.13}$$

$M_2$ : Moment

$M_2$  max (from 2 of graph MY1H/ $M_2$ ) = 50 (N·m) .....

$$M_2 = m_3 \times g \times Z = 6.525 \times 9.8 \times 37.4 \times 10^{-3} = \mathbf{2.39 \text{ (N·m)}}$$

$$\text{Load factor } \alpha_2 = M_2 / M_2 \text{ max} = 2.39 / 50 = \mathbf{0.05}$$

### M<sub>3</sub>: Moment

M<sub>3</sub> max (from 3 of graph MY1H/M<sub>3</sub>) = 38.7 (N·m) .....

$$M_3 = m_3 \times g \times X = 6.525 \times 9.8 \times 138.5 \times 10^{-3} = 8.86 \text{ (N·m)}$$

$$\text{Load factor } \alpha_3 = M_3 / M_{3 \text{ max}} = 8.86 / 38.7 = \mathbf{0.23}$$

## 5 Calculation of load factor for dynamic moment

### Equivalent load FE at impact

$$F_E = \frac{1.4}{100} \times v_a \times g \times m = \frac{1.4}{100} \times 300 \times 9.8 \times 6.525 = 268.6 \text{ (N)}$$

### M<sub>1E</sub>: Moment

M<sub>1E</sub> max (from 4 of graph MY1H/M<sub>1</sub> where 1.4v<sub>a</sub> = 420 mm/s) = 35.9 (N·m) .....

$$M_{1E} = \frac{1}{3} \times F_E \times Z = \frac{1}{3} \times 268.6 \times 37.4 \times 10^{-3} = 3.35 \text{ (N·m)}$$

$$\text{Load factor } \alpha_4 = M_{1E} / M_{1E \text{ max}} = 3.35 / 35.9 = \mathbf{0.09}$$

### M<sub>3E</sub>: Moment

M<sub>3E</sub> max (from 5 of graph MY1H/M<sub>3</sub> where 1.4v<sub>a</sub> = 420 mm/s) = 27.6 (N·m) .....

$$M_{3E} = \frac{1}{3} \times F_E \times Y = \frac{1}{3} \times 268.6 \times 29.6 \times 10^{-3} = 2.65 \text{ (N·m)}$$

$$\text{Load factor } \alpha_5 = M_{3E} / M_{3E \text{ max}} = 2.65 / 27.6 = \mathbf{0.10}$$

## 6 Sum and examination of guide load factors

$$\Sigma \alpha = \alpha_1 + \alpha_2 + \alpha_3 + \alpha_4 + \alpha_5 = \mathbf{0.601}$$

The above calculation is within the allowable value and the selected model can be used.

Select a separate shock absorber.

In an actual calculation, when the sum of guide load factors  $\Sigma \alpha$  in the formula above is more than 1, consider decreasing the speed, increasing the bore size, or changing the product series. Also, this calculation can be performed easily with the "SMC Pneumatics CAD System".

### Load mass

#### MY1H/m<sub>3</sub>

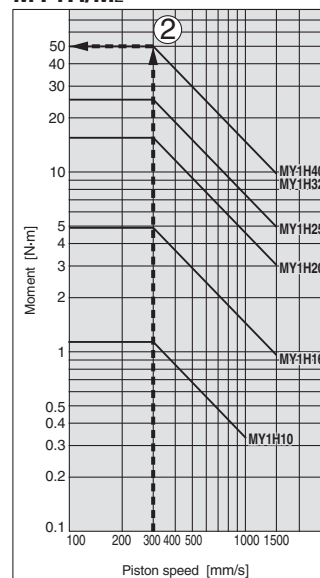

### Allowable moment

#### MY1H/M<sub>1</sub>

#### MY1H/M<sub>2</sub>

#### MY1H/M<sub>3</sub>

# Series *MY1B*

## Basic Type

Ø 10, Ø 16, Ø 20, Ø 50, Ø 63, Ø 80, Ø 100

Minimising the unit size (dimensions) and combination with other guides is possible.

## Maximum Allowable Moment/Maximum Load Mass

Model	Bore size [mm]	Maximum allowable moment [N·m]			Maximum load mass [kg]		
		M <sub>1</sub>	M <sub>2</sub>	M <sub>3</sub>	m <sub>1</sub>	m <sub>2</sub>	m <sub>3</sub>
MY1B	10	0.8	0.1	0.3	5.0	1.0	0.5
	16	2.5	0.3	0.8	15	3.0	1.7
	20	5.0	0.6	1.5	21	4.2	3.0
	50	78	9.3	23	70	14	20
	63	160	19	48	83	16.6	29
	80	315	37	95	120	24	42
	100	615	73	184	150	30	60

The above values are the maximum allowable values for moment and load. Refer to each graph regarding the maximum allowable moment and maximum allowable load for a particular piston speed.

### Caution on Design

We recommend installing an external shock absorber when the cylinder is combined with another guide (connection with floating bracket, etc.) and the maximum allowable load is exceeded, or when the operating speed is 1000 to 1500 mm/s for bore sizes Ø 16, Ø 50, Ø 63, Ø 80 and Ø 100.

### Load mass (kg)

### Moment (N·m)

### <Calculation of guide load factor>

- Maximum allowable load (1), static moment (2), and dynamic moment (3) (at the time of impact with stopper) must be examined for the selection calculations.

\* To evaluate, use  $\bar{U}_a$  (average speed) for (1) and (2), and  $\bar{U}$  (collision speed  $\bar{U} = 1.4 \bar{U}_a$ ) for (3). Calculate  $m_{max}$  for (1) from the maximum allowable load graph ( $m_1, m_2, m_3$ ) and  $M_{max}$  for (2) and (3) from the maximum allowable moment graph ( $M_1, M_2, M_3$ ).

$$\text{Sum of guide load factors } \Sigma\alpha = \frac{\text{Load mass [m]}}{\text{Maximum allowable load [mmax]}} + \frac{\text{Static moment [M] }^{(1)}}{\text{Allowable static moment [Mmax]}} + \frac{\text{Dynamic moment [ME] }^{(2)}}{\text{Allowable dynamic moment [MEmax]}} \leq 1$$

Note 1) Moment caused by the load, etc., with cylinder in resting condition.

Note 2) Moment caused by the impact load equivalent at the stroke end (at the time of impact with stopper).

Note 3) Depending on the shape of the workpiece, multiple moments may occur. When this happens, the sum of the load factors ( $\Sigma\alpha$ ) is the total of all such moments.

- Reference formula [Dynamic moment at impact]

Use the following formulae to calculate dynamic moment when taking stopper impact into consideration.

**m:** Load mass (kg)

**F:** Load (N)

**F<sub>E</sub>:** Load equivalent to impact (at impact with stopper) (N)

**$\bar{U}_a$ :** Average speed (mm/s)

**M:** Static moment (N·m)

$\bar{U} = 1.4 \bar{U}_a$  (mm/s)  $F_E = 1.4 \bar{U}_a \cdot \delta \cdot m \cdot g$  <sup>Note 4)</sup>

$\therefore M_E = \frac{1}{3} F_E \cdot L_1 = 4.57 \bar{U}_a \delta m L_1$  <sup>Note 5)</sup>

**$\bar{U}$ :** Collision speed (mm/s)

**L<sub>1</sub>:** Distance to the load's centre of gravity (m)

**M<sub>E</sub>:** Dynamic moment (N·m)

**$\delta$ :** Damper coefficient

With rubber bumper = 4/100

(MY1B10, MY1H10)

With air cushion = 1/100

With shock absorber = 1/100

**g:** Gravitational acceleration (9.8 m/s<sup>2</sup>)

Note 4)  $1.4 \bar{U}_a \delta$  is a dimensionless coefficient for calculating impact force.

Note 5) Average load coefficient ( $= \frac{1}{3}$ ): This coefficient is for averaging the maximum load moment at the time of stopper impact according to service life calculations.

- For detailed selection procedures, refer to pages 12 and 13.

### Maximum Allowable Moment

Select the moment from within the range of operating limits shown in the graphs. Note that the maximum allowable load value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the allowable load for the selected conditions.

### Maximum Load Mass

Select the load from within the range of limits shown in the graphs. Note that the maximum allowable moment value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the allowable moment for the selected conditions.

**MY1B/M<sub>1</sub>**

**MY1B/M<sub>2</sub>**

**MY1B/M<sub>3</sub>**

**MY1B/m<sub>1</sub>**

**MY1B/m<sub>2</sub>**

**MY1B/m<sub>3</sub>**

# Series MY1B Model Selection

Following are the steps for selecting the most suitable Series MY1B to your application.

## Calculation of Guide Load Factor

### 1. Operating Conditions

Cylinder ..... MY1B50-500  
Average operating speed  $v_a$  .... 300 mm/s  
Mounting orientation ..... Horizontal mounting  
Cushion ..... Air cushion  
( $\delta = 1/100$ )

For actual examples of calculation for each orientation, refer to the pages above.

### 2. Load Blocking

#### Mass and Centre of Gravity for Workpiece

Workpiece no.	Mass $m$	Centre of gravity		
		X-axis	Y-axis	Z-axis
<b>W</b>	5 kg	40 mm	40 mm	70 mm

### 3. Calculation of Load Factor for Static Load

$m_1$ : Mass

$m_1 \text{ max}$  (from (1) of graph MY1B/ $m_1$ ) = 47 (kg).....

Load factor  $\alpha_1 = m_1 / m_1 \text{ max} = 5/47 = 0.11$

$M_1$ : Moment

$M_1 \text{ max}$  (from (2) of graph MY1B/ $M_1$ ) = 52 (N·m).....

$M_1 = m_1 \times g \times X = 5 \times 9.8 \times 40 \times 10^{-3} = 1.96$  (N·m)

Load factor  $\alpha_2 = M_1 / M_1 \text{ max} = 1.96/52 = 0.04$

$M_2$ : Moment

$M_2 \text{ max}$  (from (3) of graph MY1B/ $M_2$ ) = 6.2 (N·m).....

$M_2 = m_1 \times g \times Y = 5 \times 9.8 \times 40 \times 10^{-3} = 1.96$  (N·m)

Load factor  $\alpha_3 = M_2 / M_2 \text{ max} = 1.96/6.2 = 0.32$

#### 4. Calculation of Load Factor for Dynamic Moment

Equivalent load  $F_E$  at impact

$$F_E = 1.4 \dot{U}_a \times \delta \times m \times g = 1.4 \times 300 \times \frac{1}{100} \times 5 \times 9.8 = 205.8 \text{ (N)}$$

$M_{1E}$ : Moment

$M_{1E} \text{ max}$  (from (4) of graph MY1B/ $M_1$  where  $1.4 \dot{U}_a = 420 \text{ mm/s}$ ) = 37 (N·m).....

$$M_{1E} = \frac{1}{3} \times F_E \times Z = \frac{1}{3} \times 205.8 \times 70 \times 10^{-3} = 4.81 \text{ (N·m)}$$

$$\text{Load factor } \alpha_4 = M_{1E} / M_{1E} \text{ max} = 4.81 / 37 = 0.13$$

$M_{3E}$ : Moment

$M_{3E} \text{ max}$  (from (5) of graph MY1B/ $M_3$  where  $1.4 \dot{U}_a = 420 \text{ mm/s}$ ) = 11.0 (N·m).....

$$M_{3E} = \frac{1}{3} \times F_E \times Y = \frac{1}{3} \times 205.8 \times 40 \times 10^{-3} = 2.75 \text{ (N·m)}$$

$$\text{Load factor } \alpha_5 = M_{3E} / M_{3E} \text{ max} = 2.75 / 11.0 = 0.25$$

#### 5. Sum and Examination of Guide Load Factors

$$\Sigma \alpha = \alpha_1 + \alpha_2 + \alpha_3 + \alpha_4 + \alpha_5 = 0.85 \leq 1$$

The above calculation is within the allowable value, and therefore the selected model can be used.

Select a shock absorber separately.

In an actual calculation, when the total sum of guide load factors  $\alpha$  in the formula above is more than 1, consider either decreasing the speed, increasing the bore size, or changing the product series. This calculation can be easily made using the "SMC Pneumatics CAD System".

#### Load Mass

MY1B/ $m_1$

#### Allowable Moment

MY1B/ $M_1$

MY1B/ $M_2$

MY1B/ $M_3$

# Mechanically Jointed Rodless Cylinder Basic Type

## Series MY1B

Ø 10, Ø 16, Ø 20, Ø 50, Ø 63, Ø 80, Ø 100

For bore sizes Ø 25, Ø 32 and Ø 40,  
refer to the catalogue on [www.smc.eu](http://www.smc.eu).

### How to Order

**Basic type MY1B 20 - 300 - M9BW**

**Bore size [mm]**

10	10 mm
16	16 mm
20	20 mm
50	50 mm
63	63 mm
80	80 mm
100	100 mm

**Port thread type**

Symbol	Type	Bore size
—	M thread	Ø 10, Ø 16, Ø 20
	Rc	
TN	NPT	Ø 50, Ø 63, Ø 80, Ø 100
TF	G	

**Piping**

—	Standard type
G	Centralised piping type

Note) For Ø 10, only G is available.

**Cylinder stroke [mm]**

Bore size [mm]	Standard stroke [μm]*	Maximum manufacturable stroke [mm]
10, 16	100, 200, 300, 400, 500, 600, 700	3000
20, 50, 63, 80, 100	800, 900, 1000, 1200, 1400, 1600, 1800, 2000	5000

**Made to Order**  
Refer to page 15 for details.

**Number of auto switches**

—	2 pcs.
S	1 pc.
n	"n" pcs.

**Auto switch**

—	Without auto switch (Built-in magnet)
---	---------------------------------------

For Ø 10 cylinders without an auto switch, the cylinder configuration is for the reed auto switch.  
Contact SMC when the solid state auto switch is retrofitted.

**Applicable auto switches vary depending on the bore size. Select an applicable one referring to the table below.**

**Stroke adjustment unit symbol**  
Refer to "Stroke adjustment unit" on page 15.

\* The stroke can be manufactured up to the maximum stroke from 1 mm stroke in 1 mm increments. However, when the stroke is 49 mm or less, the air cushion capability lowers and multiple auto switches cannot be mounted. Pay special attention to this point.  
Also when exceeding a 2000 mm stroke, specify "-XB11" at the end of the model number.  
For details, refer to the "Made to Order Specifications"

### Applicable Auto Switches/Refer to pages 107 to 117 for further information on auto switches.

Type	Special function	Electrical entry	Indicator light	Wiring (Output)	Load voltage		Auto switch model				Lead wire length (m)				Pre-wired connector	Applicable load		
					DC	AC	Perpendicular		In-line		0.5 (—)	1 (M)	3 (L)	5 (Z)				
							Ø 10 to Ø 20	Ø 50 to Ø 100	Ø 10 to Ø 20	Ø 50 to Ø 100

			No	2-wire	24 V	12 V	100 V	A93V**2	—	A93	Z73	●	●	●	●	—	—	—
						100 V or less	A90V	—	A90	Z80	●	—	●	—	—	—	IC circuit	

\*1 Water resistant type auto switches can be mounted on the above models, but in such case SMC cannot guarantee water resistance.

Consult with SMC regarding water resistant types with the above model numbers.

\*2 1 m type lead wire is only applicable to D-A93.

\* Lead wire length symbols: 0.5 m ..... — (Example) M9NW  
1 m ..... M (Example) M9NWM  
3 m ..... L (Example) M9NWL  
5 m ..... Z (Example) M9NWZ

\* Solid state auto switches marked with "○" are produced upon receipt of order.

\* Separate switch spacers (BMG2-012) are required to retrofit auto switches (M9 type) on cylinders Ø 63 to Ø 100.

\*\* D-M9□□□ type cannot be mounted on Ø 50. Select auto switches in brackets.

\* There are other applicable auto switches than listed above. For details, refer to page 115.

\* Auto switches are shipped together (not assembled).

# Mechanically Jointed Rodless Cylinder **Series MY1B**

**Made to Order: Specifications**  
(Refer to page 118 to 120 for details.)

Symbol	Specifications
-X168	Helical insert thread specifications
-XB11	Long stroke type
-XB22	Shock absorber soft type Series RJ type
-XC67	NBR rubber lining in dust seal band
20-	Cooper-free

## Specifications

Bore size [mm]		10	16	20	50	63	80	100
Fluid		Air						
Action		Double acting						
Operating pressure range		0.2 to 0.8 MPa	0.15 to 0.8 MPa	0.1 to 0.8 MPa				
Proof pressure		1.2 MPa						
Ambient and fluid temperature		5 to 60 °C						
Cushion		Rubber bumper	Air cushion					
Lubrication		Non-lube						
Stroke length tolerance		1000 or less <sup>+1.8</sup> <sub>0</sub> 1001 to 3000 <sup>+2.8</sup> <sub>0</sub>		2700 or less <sup>+1.8</sup> <sub>0</sub> , 2701 to 5000 <sup>+2.8</sup> <sub>0</sub>				
Piping	Front/Side port	M5 x 0.8			Rc 3/8		Rc 1/2	
Port size	Bottom port	Ø 4		Ø 10		Ø 18		

## Piston Speed

Bore size [mm]	10	16, 20, 50 to 100
Without stroke adjustment unit	100 to 500 mm/s	100 to 1000 mm/s
Stroke adjustment unit	A unit	100 to 200 mm/s
	L unit and H unit	100 to 1000 mm/s
		100 to 1500 mm/s <sup>(2)</sup>

Note1) Be aware that when the stroke adjustment range is increased by manipulating the adjustment bolt, the air cushion capacity decreases. Also, when exceeding the air cushion stroke ranges on page 18, the piston speed should be 100 to 200 mm per second.

Note2) The piston speed is 100 to 1000 mm/s for centralised piping.

Note3) Use at a speed within the absorption capacity range. Refer to page 17.

## Stroke Adjustment Unit Specifications

Bore size [mm]	10	16	20
Unit symbol	A	A	A
Configuration	With adjustment bolt	With adjustment bolt	With adjustment bolt
Shock absorber model	RB 0805 + with adjustment bolt	RB 1007 + with adjustment bolt	RB 0806 + with adjustment bolt
Stroke adjustment range by intermediate fixing spacer [mm]	Without spacer	0 to -5	0 to -6
	With short spacer	—	-5.6 to -11.2
	With long spacer	—	-11.2 to -16.8

Note) Intermediate fixing spacer is not available for Ø 10.

\* Stroke adjustment range is applicable for one side when mounted on a cylinder.

## Stroke Adjustment Unit Symbol

		Right side stroke adjustment unit									
		Without unit	A: With adjustment bolt		L: With low load shock absorber + Adjustment bolt		H: With high load shock absorber + Adjustment bolt				
Left side stroke adjustment unit	Without unit	—	SA	SA6	SA7	SL	SL6	SL7	SH	SH6	SH7
	A: With adjustment bolt	AS	A	AA6	AA7	AL	AL6	AL7	AH	AH6	AH7

	With long spacer	A7S	A7A	A7A6	A7	A7L	A7L6	A7L7	A7H	A7H6	A7H7
	L: With low load shock absorber + Adjustment bolt	LS	LA	LA6	LA7	L	LL6	LL7	LH	LH6	LH7
	With short spacer	L6S	L6A	L6A6	L6A7	L6L	L6	L6L7	L6H	L6H6	L6H7
	With long spacer	L7S	L7A	L7A6	L7A7	L7L	L7L6	L7	L7H	L7H6	L7H7
	H: With high load shock absorber + Adjustment bolt	HS	HA	HA6	HA7	HL	HL6	HL7	H	HH6	HH7
	With short spacer	H6S	H6A	H6A6	H6A7	H6L	H6L6	H6L7	H6H	H6	H6H7
	With long spacer	H7S	H7A	H7A6	H7A7	H7L	H7L6	H7L7	H7H	H7H6	H7

\* Spacers are used to fix the stroke adjustment unit at an intermediate stroke position.

## Shock Absorbers for L and H Units

Model	Stroke adjustment unit	Bore size [mm]	
		10	20
Standard (Shock absorber/RB series)	L	—	RB0806
	H	RB0805	RB1007
Shock absorber/soft type RJ series mounted (-XB22)	L	—	RJ0806H
	H	RJ0805	RJ1007H

\* The shock absorber service life is different from that of the MY1B cylinder depending on operating conditions. Refer to the RB Series Specific Product Precautions for the replacement period.

\* Mounted shock absorber soft type RJ series (-XB22) is made to order specifications.

## Stroke adjustment unit mounting diagram

## Example of H6H7 attachment

## Shock Absorber Specifications

Model	RB 0805	RB 0806	RB 1007
Max. energy absorption [J]	1.0	2.9	5.9
Stroke absorption [mm]	5	6	7
Max. collision speed [mm/s]	1000	1500	1500
Max. operating frequency [cycle/min]	80	80	70
Spring force [N]	Extended	1.96	1.96
	Retracted	3.83	4.22
Operating temperature range [°C]	5 to 60		

\* The shock absorber service life is different from that of the MY1B cylinder depending on operating conditions. Refer to the RB Series Specific Product Precautions for the replacement period.

# Series MY1B

## Theoretical Output

Bore size [mm]	Piston area (mm <sup>2</sup> )	Operating pressure [MPa]							[N]
		0.2	0.3	0.4	0.5	0.6	0.7	0.8	
10	78	15	23	31	39	46	54	62	
16	200	40	60	80	100	120	140	160	
20	314	62	94	125	157	188	219	251	
50	1962	392	588	784	981	1177	1373	1569	
63	3115	623	934	1246	1557	1869	2180	2492	
80	5024	1004	1507	2009	2512	3014	3516	4019	
100	7850	1570	2355	3140	3925	4710	5495	6280	

Note) Theoretical output (N) = Pressure (MPa) x Piston area (mm<sup>2</sup>)

## Weight

Bore size [mm]	Basic weight	Additional weight per each 50 mm of stroke	Weight of moving parts	Side support bracket weight (per set)	Stroke adjustment unit weight (per unit)			[kg]
				Type A and B	A unit weight	L unit weight	H unit weight	
10	0.15	0.04	0.03	0.003	0.01	—	0.02	
16	0.61	0.06	0.07	0.01	0.04	—	—	
20	1.06	0.10	0.14	0.02	0.05	0.05	0.10	
50	7.78	0.44	1.40	0.04	—	—	—	
63	13.10	0.70	2.20	0.08	—	—	—	
80	20.70	1.18	4.80	0.17	—	—	—	
100	35.70	1.97	8.20	0.17	—	—	—	

Calculation: (Example) MY1B20-300A

- Basic weight .....1.06 kg
- Cylinder stroke .....300 stroke
- Additional weight .....0.10/50 stroke  
1.06 + 0.10 x 300/50 + 0.05 x 2 ≒ 2.17 kg
- Weight of A unit .....1.76 kg

## Option

### Stroke Adjustment Unit Part No.

**MY-A 20 H2-6N**

Stroke adjustment unit

Bore size

10	10 mm
16	16 mm
20	20 mm

Note) Stroke adjustment unit is not available for Ø 50, Ø 63, Ø 80 and Ø 100.

Symbol	Stroke adjustment unit	Mounting position
A1	A unit	Left
A2	A unit	Right
L1	L unit	Left
L2	L unit	Right
H1	H unit	Left
H2	H unit	Right

Note 1) Refer to page 15 for details about adjustment range.  
Note 2) A and H unit only for Ø 10, A unit only for Ø 16

Intermediate fixing spacer

—	Without spacer
6	Short spacer
7	Long spacer

Spacer delivery style

—	Unit installed
N	Spacer only

\* Spacers are used to fix the stroke adjustment unit at an intermediate stroke position.  
\* Spacers are shipped for a set of two.  
Note) Intermediate fixing spacer is not available for Ø 10.

### Component Parts

MY-A20H2 (Without spacer)	MY-A20H2-6 (With short spacer)	MY-A20H2-7 (With long spacer)	MY-A20H2-6N (Short spacer only)
	Short spacer	Long spacer	Short spacer
			MY-A20H2-7N (Long spacer only)
			Long spacer

### Side Support Part No.

Type	Bore size [mm]	10	16	20	50	63	80	100
Side support A		MY-S10A	MY-S16A	MY-S20A	MY-S32A	MY-S50A	MY-S63A	
Side support B		MY-S10B	MY-S16B	MY-S20B	MY-S32B	MY-S50B	MY-S63B	

For details about dimensions, etc., refer to page 28.

A set of side supports consists of a left support and a right support.

## Cushion Capacity

### Cushion Selection

#### <Rubber bumper>

Rubber bumpers are a standard feature on MY1B10.

Since the stroke absorption of rubber bumpers is short, when adjusting the stroke with an A unit, install an external shock absorber.

The load and speed range which can be absorbed by a rubber bumper is inside the rubber bumper limit line of the graph.

#### <Air cushion>

Air cushions are a standard feature on mechanically jointed rodless cylinders. (Except Ø 10.)

The air cushion mechanism is incorporated to prevent excessive impact of the piston at the stroke end during high speed operation. The purpose of air cushion, thus, is not to decelerate the piston near the stroke end.

The ranges of load and speed that air cushions can absorb are within the air cushion limit lines shown in the graphs.

#### <Stroke adjustment unit with shock absorber>

Use this unit when operating with a load or speed exceeding the air cushion limit line, or when cushioning is required outside of the effective air cushion stroke range due to stroke adjustment.

#### L unit

Use this unit when cushioning is necessary outside of the effective air cushion range even if the load and speed are within the air cushion limit line, or when the cylinder is operated in a load and speed range above the air cushion limit line and below the L unit limit line.

#### H unit

Use this unit when the cylinder is operated in a load and speed range above the L unit limit line and below the H unit limit line.

## ⚠ Caution

1. Refer to the figure below when using the adjustment bolt to perform stroke adjustment.

When the effective stroke of the shock absorber decreases as a result of stroke adjustment, the absorption capacity decreases dramatically. Secure the adjustment bolt at the position where it protrudes approximately 0.5 mm from the shock absorber.

2. Do not use a shock absorber together with air cushion.

### Absorption Capacity of Rubber Bumper, Air Cushion and Stroke Adjustment Units

#### MY1B10

Horizontal collision:  $P = 0.5 \text{ MPa}$

#### MY1B63

Horizontal collision:  $P = 0.5 \text{ MPa}$

#### MY1B16

Horizontal collision:  $P = 0.5 \text{ MPa}$

#### MY1B80

Horizontal collision:  $P = 0.5 \text{ MPa}$

#### MY1B20

Horizontal collision:  $P = 0.5 \text{ MPa}$

#### MY1B100

Horizontal collision:  $P = 0.5 \text{ MPa}$

#### MY1B50

Horizontal collision:  $P = 0.5 \text{ MPa}$

## Cushion Capacity

### Air Cushion Stroke

[mm]

Bore size [mm]	Cushion stroke
16	12
20	15
50	30
63	37
80	40
100	40

### Rubber Bumper (Ø 10 only) Positive Stroke from One End Due to Pressure

### Tightening Torque for Stroke Adjustment Unit Holding Bolts

[N·m]

Bore size [mm]	Unit	Tightening torque
10	A	0.4
	H	
16	A	0.7
	H	
20	A	1.8
	L	
	H	

### Tightening Torque for Stroke Adjustment Unit Lock Plate Holding Bolts

[N·m]

Bore size [mm]	Unit	Tightening torque
20	H	1.2

### Calculation of Absorbed Energy for Stroke Adjustment Unit with Shock Absorber

[N·m]

Type of impact	Horizontal collision	Vertical (Downward)	Vertical (Upward)
Kinetic energy $E_1$		$\frac{1}{2} m \cdot v^2$	
Thrust energy $E_2$	$F \cdot s$	$F_s + m \cdot g \cdot s$	$F_s - m \cdot g \cdot s$
Absorbed energy $E$	$E_1 + E_2$		

Symbol

$v$ : Speed of impact object (m/s)

$F$ : Cylinder thrust (N)

$s$ : Shock absorber stroke (m)

$m$ : Mass of impact object (kg)

$g$ : Gravitational acceleration (9.8 m/s<sup>2</sup>)

Note) The speed of the impact object is measured at the time of impact with the shock absorber.

## ⚠ Precautions

### Specific product precautions

## ⚠ Caution

Use caution not to get your hands caught in the unit.

- When using a product with stroke adjustment unit, the space between the slide table (slider) and the stroke adjustment unit becomes narrow at the stroke end, causing a danger of hands getting caught. Install a protective cover to prevent direct contact with the human body.

### <Fastening of unit>

The unit can be secured by evenly tightening the four unit holding bolts.

## ⚠ Caution

Do not operate with the stroke adjustment unit fixed in an intermediate position.

When the stroke adjustment unit is fixed in an intermediate position, slippage can occur depending on the amount of energy released at the time of an impact. In such cases, as a stroke adjustment unit with the spacer for intermediate securing is available, it is recommended to use it.

(Except Ø 10)

For other lengths, please consult with SMC (Refer to "Tightening Torque for Stroke Adjustment Unit Holding Bolts".)

### <Stroke adjustment with adjustment bolt>

Loosen the adjustment bolt lock nut, and adjust the stroke from the lock plate side using a hexagon wrench. Retighten the lock nut.

### <Stroke adjustment with shock absorber>

Loosen the two lock plate holding bolts, turn the shock absorber and adjust the stroke. Then, uniformly tighten the lock plate holding bolts to secure the shock absorber.

Take care not to over-tighten the holding bolts. (Except Ø 10 and Ø 20 L unit.) (Refer to "Tightening Torque for Stroke Adjustment Unit Lock Plate Holding Bolts".)

Note)

Although the lock plate may slightly bend due to tightening of the lock plate holding bolt, this does not affect the shock absorber and locking function.

## Construction: Ø 10

### Centralised piping type: MY1B10G

### Component Parts

No.	Description	Material	Note
1	Cylinder tube	Aluminium alloy	Hard anodised
2	Head cover WR	Aluminium alloy	Painted
3	Head cover WL	Aluminium alloy	Painted
4	Piston yoke	Aluminium alloy	Hard anodised
5	Piston	Aluminium alloy	Chromated
6	End Cover	Special resin	
7	Wear ring	Special resin

	MY1B100	206	236							

\* A set of side supports consists of a left support and a right support.

## Guide for Side Support Application

For long stroke operation, the cylinder tube may be deflected depending on its own weight and the load mass. In such a case, use a side support in the middle section. The spacing (L) of the support must be no more than the values shown in the graph on the right.

## Caution

1. If the cylinder mounting surfaces are not measured accurately, using a side support may cause poor operation. Therefore, be sure to level the cylinder tube when mounting. Also, for long stroke operation involving vibration and impact, use of a side support is recommended even if the spacing value is within the allowable limits shown in the graph.
2. Support brackets are not for mounting; use them solely for providing support.

## Floating Bracket

Facilitates connection to other guide systems.

Applicable bore size

**Ø 10**

**MY-J10**

### Application Example

### Mounting Example

Note) A set of brackets with floating mechanism consists of a left bracket and a right bracket.

Applicable bore size

**Ø 16, Ø 20**

**MY-J16/MY-J20**

## Floating Bracket

Facilitates connection to other guide systems.

Applicable bore size

**Ø 80, Ø 100**

**MY-J80/MY-J100**

### Application Example

### Floating Bracket Operating Precautions

#### ⚠ Caution

When connecting to a load which has an external guide mechanism, use a discrepancy absorption mechanism.

Mount the external guide mounting brackets and floating brackets in a place where the required degree of freedom for the floating Y and Z axes can be secured.

The thrust transmission area of the floating bracket must be fixed so that it does not partially contact with the body.

### Mounting Example

Support bracket mounting area is heat treated at H<sub>RC</sub>40 or above.

Hexagon Socket  
Head Cap Screw  
Tightening Torque (N·m)

Model	Applicable bore size	A	B (max.)	C (min.)
MY-J 80	MY1B 80□	181	15	9
MY-J100	MY1B100□	221	15	9

Model	Tightening torque
MY-J 80	25
MY-J100	44

- Note) • Flat bar or round bar mounting are possible for the support bracket (slanted lines) mounted by the customer.  
• "B" and "C" indicate the allowable mounting dimensions for the support bracket (flat bar or round bar).  
• Consider support brackets with dimensions that allow the floating mechanism to function properly.

# Series MY1M

## Slide Bearing Guide Type

Ø 16, Ø 20, Ø 25, Ø 32, Ø 40, Ø 50, Ø 63

Simple guide type allows direct mounting of workpieces.

# Series MY1M Prior to Use

## Maximum Allowable Moment/Maximum Load Mass

Model	Bore size [mm]	Maximum allowable moment [N·m]			Maximum load mass [kg]		
		M <sub>1</sub>	M <sub>2</sub>	M <sub>3</sub>	m <sub>1</sub>	m <sub>2</sub>	m <sub>3</sub>
MY1M	16	6.0	3.0	1.0	18	7	2.1
	20	10	5.2	1.7	26	10.4	3
	25	15	9.0	2.4	38	15	4.5
	32	30	15	5.0	57	23	6.6
	40	59	24	8.0	84	33	10
	50	115	38	15	120	48	14
	63	140	60	19	180	72	21

The above values are the maximum allowable values for moment and load. Refer to each graph regarding the maximum allowable moment and maximum allowable load for a particular piston speed.

### Maximum Allowable Moment

Select the moment from within the range of operating limits shown in the graphs. Note that the maximum allowable load value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the allowable load for the selected conditions.

### Load mass (kg)

### Moment (N·m)

### <Calculation of guide load factor>

1. Maximum allowable load (1), static moment (2), and dynamic moment (3) (at the time of impact with stopper) must be examined for the selection calculations.

\* To evaluate, use  $\bar{v}_a$  (average speed) for (1) and (2), and  $v$  (collision speed  $v = 1.4\bar{v}_a$ ) for (3). Calculate  $m_{max}$  for (1) from the maximum allowable load graph ( $m_1, m_2, m_3$ ) and  $M_{max}$  for (2) and (3) from the maximum allowable moment graph ( $M_1, M_2, M_3$ ).

$$\text{Sum of guide load factors } \Sigma \alpha = \frac{\text{Load mass [m]}}{\text{Maximum allowable load [mmax]}} + \frac{\text{Static moment [M] }^{(1)}}{\text{Allowable static moment [Mmax]}} + \frac{\text{Dynamic moment [ME] }^{(2)}}{\text{Allowable dynamic moment [Mmax]}} \leq 1$$

Note 1) Moment caused by the load, etc., with cylinder in resting condition.

Note 2) Moment caused by the impact load equivalent at the stroke end (at the time of impact with stopper).

Note 3) Depending on the shape of the workpiece, multiple moments may occur. When this happens, the sum of the load factors ( $\alpha$ ) is the total of all such moments.

### Maximum Load Mass

Select the load from within the range of limits shown in the graphs. Note that the maximum allowable moment value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the allowable moment for the selected conditions.

### 2. Reference formula [Dynamic moment at impact]

Use the following formulae to calculate dynamic moment when taking stopper impact into consideration.

**m:** Load mass (kg)

**F:** Load (N)

**F<sub>E</sub>:** Load equivalent to impact (at impact with stopper) (N)

**$\bar{v}_a$ :** Average speed (mm/s)

**M:** Static moment (N·m)

**$\bar{v}$ :** Collision speed (mm/s)

**L<sub>1</sub>:** Distance to the load's centre of gravity (m)

**M<sub>E</sub>:** Dynamic moment (N·m)

**$\delta$ :** Damper coefficient At collision:  $\bar{v} = 1.4\bar{v}_a$

With rubber bumper = 4/100

(MY1B10, MY1H10)

With air cushion = 1/100

With shock absorber = 1/100

**g:** Gravitational acceleration (9.8 m/s<sup>2</sup>)

$$\bar{v} = 1.4\bar{v}_a \text{ (mm/s)} \quad F_E = 1.4\bar{v}_a \cdot \delta \cdot m \cdot g \quad \text{Note 4)}$$

$$\therefore M_E = \frac{1}{3} \cdot F_E \cdot L_1 = 4.57\bar{v}_a \delta m L_1 \text{ (N·m)} \quad \text{Note 5)}$$

Note 4)  $1.4\bar{v}_a \delta$  is a dimensionless coefficient for calculating impact force.

Note 5) Average load coefficient ( $= \frac{1}{3}$ ): This coefficient is for averaging the maximum load moment at the time of stopper impact according to service life calculations.

3. For detailed selection procedures, refer to pages 36 and 37.

**MY1M/M<sub>1</sub>**

**MY1M/M<sub>2</sub>**

**MY1M/M<sub>3</sub>**

**MY1M/m<sub>1</sub>**

**MY1M/m<sub>2</sub>**

**MY1M/m<sub>3</sub>**

# Model Selection

Following are the steps for selecting the most suitable Series MY1M to your application.

## Calculation of Guide Load Factor

### 1. Operating Conditions

Cylinder ..... MY1M40-500

Average operating speed  $V_a$  ... 200 mm/s

Mounting orientation ..... Horizontal mounting

Cushion ..... Air cushion  
( $\delta = 1/100$ )

$W_a$ : Connection plate  $t = 10$  (880 g)

$W_d$ : Workpiece (500 g)

$W_c$ : MHL2-16D1 (795 g)

MY1M40-500

$W_b$ : MGGLB25-200 (4.35 kg)

For actual examples of calculation for each orientation, refer to the pages above.

### 2. Load Blocking

### Mass and Centre of Gravity for Each Workpiece

Workpiece no. $W_n$	Mass $m_n$	Centre of gravity		
		X-axis $X_n$	Y-axis $Y_n$	Z-axis $Z_n$
$W_a$	0.88 kg	65 mm	0 mm	5 mm
$W_b$	4.35 kg	150 mm	0 mm	42.5 mm
$W_c$	0.795 kg	150 mm	111 mm	42.5 mm
$W_d$	0.5 kg	150 mm	210 mm	42.5 mm

$n=a, b, c, d$

### 3. Composite centre of Gravity Calculation

$$m_1 = \sum m_n$$

$$= 0.88 + 4.35 + 0.795 + 0.5 = 6.525 \text{ kg}$$

$$X = \frac{1}{m_1} \times \sum (m_n \times X_n)$$

$$= \frac{1}{6.525} (0.88 \times 65 + 4.35 \times 150 + 0.795 \times 150 + 0.5 \times 150) = 138.5 \text{ mm}$$

$$Y = \frac{1}{m_1} \times \sum (m_n \times Y_n)$$

$$= \frac{1}{6.525} (0.88 \times 0 + 4.35 \times 0 + 0.795 \times 111 + 0.5 \times 210) = 29.6 \text{ mm}$$

$$Z = \frac{1}{m_1} \times \sum (m_n \times Z_n)$$

$$= \frac{1}{6.525} (0.88 \times 5 + 4.35 \times 42.5 + 0.795 \times 42.5 + 0.5 \times 42.5) = 37.4 \text{ mm}$$

### 4. Calculation of load factor for static load

$m_1$ : Mass

$m_1 \text{ max}$  (from (1) of graph MY1M/ $m_1$ ) = 84 (kg).....

$$\text{Load factor } \alpha_1 = m_1 / m_1 \text{ max} = 6.525 / 84 = 0.08$$

$M_1$ : Moment

$M_1 \text{ max}$  (from (2) of graph MY1M/ $M_1$ ) = 59 (N·m).....

$$M_1 = m_1 \times g \times X = 6.525 \times 9.8 \times 138.5 \times 10^{-3} = 8.86 \text{ (N·m)}$$

$$\text{Load factor } \alpha_2 = M_1 / M_1 \text{ max} = 8.86 / 59 = 0.15$$

**M<sub>2</sub>** : Moment

**M<sub>2</sub> max** (from (3) of graph MY1M/M<sub>2</sub>) = 24 (N·m).....

**M<sub>3</sub> = m<sub>1</sub> × g × Y** = 6.525 × 9.8 × 29.6 × 10<sup>-3</sup> = 1.89 (N·m)

Load factor **α<sub>3</sub> = M<sub>2</sub>/M<sub>2</sub> max** = 1.89/24 = **0.08**

## 5. Calculation of Load Factor for Dynamic Moment

**Equivalent load F<sub>E</sub> at impact**

**F<sub>E</sub> = 1.4Va × δ × m × g** = 1.4 × 200 ×  $\frac{1}{100}$  × 6.525 × 9.8 = 179.1 (N)

**M<sub>1E</sub>** : Moment

**M<sub>1E</sub> max** (from (4) of graph MY1M/M<sub>1</sub> where 1.4Va = 280 mm/s) = 42.1 (N·m).....

**M<sub>1E</sub> =  $\frac{1}{3}$  × F<sub>E</sub> × Z** =  $\frac{1}{3}$  × 179.1 × 37.4 × 10<sup>-3</sup> = 2.23 (N·m)

Load factor **α<sub>4</sub> = M<sub>1E</sub>/M<sub>1E</sub> max** = 2.23/42.1 = **0.05**

**M<sub>3E</sub>** : Moment

**M<sub>3E</sub> max** (from (5) of graph MY1M/M<sub>3</sub> where 1.4Va = 280 mm/s) = 5.7 (N·m).....

**M<sub>3E</sub> =  $\frac{1}{3}$  × F<sub>E</sub> × Y** =  $\frac{1}{3}$  × 179.1 × 29.6 × 10<sup>-3</sup> = 1.77 (N·m)

Load factor **α<sub>5</sub> = M<sub>3E</sub>/M<sub>3E</sub> max** = 1.77/5.7 = **0.31**

## 6. Sum and Examination of Guide Load Factors

**Σα = α<sub>1</sub> + α<sub>2</sub> + α<sub>3</sub> + α<sub>4</sub> + α<sub>5</sub> = 0.67 ≤ 1**

The above calculation is within the allowable value, and therefore the selected model can be used.

Select a shock absorber separately.

In an actual calculation, when the total sum of guide load factors α in the formula above is more than 1, consider either decreasing the speed, increasing the bore size, or changing the product series. This calculation can be easily made using the “SMC Pneumatics CAD System”.

**MY1M/M<sub>3</sub>**

# Mechanically Jointed Rodless Cylinder Slide Bearing Guide Type

## Series MY1M

Ø 16, Ø 20, Ø 25, Ø 32, Ø 40, Ø 50, Ø 63

### How to Order

Slide bearing guide type

MY1M 20 G - 300 L - M9BW -

Slide bearing guide type

Bore size

16	16 mm
20	20 mm
25	25 mm
32	32 mm
40	40 mm
50	50 mm
63	63 mm

Port thread type

Symbol	Type	Bore size
—	M thread	Ø 16, Ø 20
	Rc	Ø 25, Ø 32,
TN	NPT	Ø 40, Ø 50,
TF	G	Ø 63

Piping

—	Standard type
G	Centralised piping type

Cylinder stroke [mm]

Bore size [mm]	Standard stroke [μm]*	Maximum manufacturable stroke [mm]
16	100, 200, 300, 400, 500, 600, 700	3000
20, 25, 32 40, 50, 63	800, 900, 1000, 1200, 1400, 1600 1800, 2000	5000

\* The stroke can be manufactured up to the maximum stroke from 1 mm stroke in 1 mm increments. However, when the stroke is 49 mm or less, the air cushion capability lowers and multiple auto switches cannot be mounted. Pay special attention to this point. Also when exceeding a 2000 mm stroke, specify "XB1" at the end of the model number. For details, refer to the "Made to Order Specifications"

Made to Order  
Refer to page 39 for details.

Number of auto switches

—	2 pcs.
S	1 pc.
n	"n" pcs.

Auto switch

—	Without auto switch (Built-in magnet)
---	---------------------------------------

Applicable auto switches vary depending on the bore size. Select an applicable one referring to the table below.

Stroke adjustment unit symbol

Refer to "Stroke adjustment unit" on page 39.

### Applicable Auto Switches/Refer to pages 107 to 117 for further information on auto switches.

Without stroke adjustment unit		100 to 1000 mm/s
Stroke adjustment unit	A unit	100 to 1000 mm/s <sup>(1)</sup>
	L unit and H unit	100 to 1500 mm/s <sup>(2)</sup>

Note 1) Be aware that when the stroke adjustment range is increased by manipulating the adjustment bolt, the air cushion capacity decreases. Also, when exceeding the air cushion stroke ranges on page 34, the piston speed should be 100 to 200 mm per second.

Note 2) The piston speed is 100 to 1000 mm/s for centralised piping.

Note 3) Use at a speed within the absorption capacity range. Refer to page 42.

	H	—	RJ1007H	RJ1412H	—	—	—	—

\* The shock absorber service life is different from that of the MY1M cylinder depending on operating conditions. Refer to the RB Series Specific Product Precautions for the replacement period.

\* Mounted shock absorber soft type RJ series (-XB22) is made to order specifications.

## Shock Absorber Specifications

Model		RB 0806	RB 1007	RB 1412	RB 2015	RB 2725
Max. energy absorption [J]		2.9	5.9	19.6	58.8	147
Stroke absorption [mm]		6	7	12	15	25
Max. collision speed [mm/s]		1500				
Max. operating frequency [cycle/min]		80	70	45	25	10
Spring force [N]	Extended	1.96	4.22	6.86	8.34	8.83
	Retracted	4.22	6.86	15.98	20.50	20.01
Operating temperature range [°C]		5 to 60				

\* The shock absorber service life is different from that of the MY1M cylinder depending on operating conditions. Refer to the RB Series Specific Product Precautions for the replacement period.

# Series MY1M

## Theoretical Output

Bore size [mm]	Piston area [mm <sup>2</sup> ]	Operating pressure [MPa]						
		0.2	0.3	0.4	0.5	0.6	0.7	0.8
16	200	40	60	80	100	120	140	160
20	314	62	94	125	157	188	219	251
25	490	98	147	196	245	294	343	392
32	804	161	241	322	402	483	563	643
40	1256	251	377	502	628	754	879	1005
50	1962	392	588	784	981	1177	1373	1569
63	3115	623	934	1246	1557	1869	2180	2492

Note) Theoretical output (N) = Pressure (MPa) x Piston area (mm<sup>2</sup>)

## Weight

Bore size [mm]	Basic weight	Additional weight per each 50 mm of stroke	Weight of moving parts	Side support bracket weight (per set)	Stroke adjustment unit weight (per unit)		
				Type A and B	A unit weight	L unit weight	H unit weight
16	0.67	0.12	0.19	0.01	0.03	0.04	—
20	1.11	0.16	0.28	0.02	0.04	0.05	0.08
25	1.64	0.24	0.39	0.02	0.07	0.11	0.18
32	3.27	0.38	0.81	0.04	0.14	0.23	0.39
40	5.88	0.56	1.41	0.08	0.25	0.34	0.48
50	10.06	0.77	2.51	0.08	0.36	0.51	0.81
63	16.57	1.11	3.99	0.17	0.68	0.83	1.08

Calculation: (Example) **MY1M25-300A**

- Basic weight ..... 1.64 kg
- Cylinder stroke ..... 300 stroke
- Additional weight ..... 0.24/50 stroke  
1.64 + 0.24 x 300/50 + 0.07 x 2 = 3.22 kg
- Weight of A unit ..... 0.07 kg

Side support A	MY-S16A	MY-S20A	MY-S25A	MY-S32A	MY-S40A	MY-S40A	MY-S63A
Side support B	MY-S16B	MY-S20B	MY-S25B	MY-S32B	MY-S40B	MY-S40B	MY-S63B

For details about dimensions, etc., refer to page 51.

A set of side supports consists of a left support and a right support.

## Cushion Capacity

### Cushion Selection

#### <Air cushion>

Air cushions are a standard feature on mechanically jointed rodless cylinders. The air cushion mechanism is incorporated to prevent excessive impact of the piston at the stroke end during high speed operation. The purpose of air cushion, thus, is not to decelerate the piston near the stroke end. The ranges of load and speed that air cushions can absorb are within the air cushion limit lines shown in the graphs.

#### <Stroke adjustment unit with shock absorber>

Use this unit when operating with a load or speed exceeding the air cushion limit line, or when cushioning is required outside of the effective air cushion stroke range due to stroke adjustment.

#### <L unit>

Use this unit when the cylinder stroke is outside of the effective air cushion range even if the load and speed are within the air cushion limit line, or when the cylinder is operated in a load and speed range above the air cushion limit line or below the L unit limit line.

#### <H unit>

Use this unit when the cylinder is operated in a load and speed range above the L unit limit line and below the H unit limit line.

## ⚠ Caution

1. Refer to the figure below when using the adjustment bolt to perform stroke adjustment.

When the effective stroke of the shock absorber decreases as a result of stroke adjustment, the absorption capacity decreases dramatically. Secure the adjustment bolt at the position where it protrudes approximately 0.5 mm from the shock absorber.

2. Do not use a shock absorber together with air cushion.

### Air Cushion Stroke

[mm]

Bore size [mm]	Cushion stroke
16	12
20	15
25	15
32	19
40	24
50	30
63	37

### Tightening Torque for Stroke Adjustment Unit Lock Plate Holding Bolts [N·m]

Bore size [mm]	Unit	Tightening torque
25	L	1.2
	H	3.3
32	L	3.3
	H	10
40	L	3.3
	H	10

### Calculation of Absorbed Energy for Stroke Adjusting Unit with Shock Absorber [N·m]

Type of impact	Horizontal collision	Vertical (Downward)	Vertical (Upward)
			
Kinetic energy E <sub>1</sub>		$\frac{1}{2} m \cdot v^2$	
Thrust energy E <sub>2</sub>	F · s	F · s + m · g · s	F · s - m · g · s
Absorbed energy E		E <sub>1</sub> + E <sub>2</sub>	

Symbol

v: Speed of impact object (m/s)

F: Cylinder thrust (N)

s: Shock absorber stroke (m)

m: Mass of impact object (kg)

g: Gravitational acceleration (9.8 m/s<sup>2</sup>)

Note) The speed of the impact object is measured at the time of impact with the shock absorber.

## ⚠ Precautions

### Specific product precautions

## ⚠ Caution

Use caution not to get your hands caught in the unit.

- When using a product with stroke adjustment unit, the space between the slide table (slider) and the stroke adjustment unit becomes narrow at the stroke end, causing a danger of hands getting caught. Install a protective cover to prevent direct contact with the human body.

### <Fastening of unit>

The unit can be secured by evenly tightening the four unit holding bolts.

## ⚠ Caution

**Do not operate with the stroke adjustment unit fixed in an intermediate position.**

When the stroke adjustment unit is fix in an intermediate position, slippage can occur depending on the amount of energy released at the time of an impact. In such cases, as a stroke adjustment unit with the spacer for intermediate securing is available, it is recommended to use it.

For other lengths, please consult with SMC (Refer to "Tightening Torque for Stroke Adjusting Unit Holding Bolts".)

### <Stroke adjustment with adjustment bolt>

Loosen the adjustment bolt lock nut, and adjust the stroke from the lock plate side using a hexagon wrench. Retighten the lock nut.

### <Stroke adjustment with shock absorber>

Loosen the two lock plate holding bolts, turn the shock absorber and adjust the stroke. Then, uniformly tighten the lock plate holding bolts to secure the shock absorber.

Take care not to over-tighten the holding bolts. (Except Ø 16, Ø 20, Ø 50, Ø 63)

(Refer to "Tightening Torque for Stroke Adjusting Unit Lock Plate Holding Bolts".)

Note) Although the lock plate may slightly bend due to tightening of the lock plate holding bolt, this does not affect the shock absorber and locking function.

\* Seal kit includes 19, 20, 21, 22 and 39. Order the seal kit based on each bore size.

\* Seal kit includes a grease pack (10 g).

When 16 and 17 are shipped independently, a grease pack is included. (10 g per 1000 strokes)

Order with the following part number when only the grease pack is needed.

**Grease pack part number: GR-S-010** (10 g), **GR-S-020** (20 g)

Note) Two kinds of dust seal bands are available. Verify the type to use, since the part number varies depending on the treatment of the hexagon socket head set screw 33.

## Stroke Adjustment Unit

With high load shock absorber + Adjustment bolt

MY1M Bore size  — Stroke  H

\* Since dimension EY of the H type unit is greater than the table top height (dimension H), when mounting a workpiece that exceeds the overall length (dimension L) of the slide table, allow a clearance of dimension "a" or larger on the workpiece side.

\* A set of side supports consists of a left support and a right support.

## Guide for Side Support Application

For long stroke operation, the cylinder tube may be deflected depending on its own weight and the load mass. In such a case, use a side support in the middle section. The spacing (L) of the support must be no more than the values shown in the graph on the right.

### ⚠ Caution

1. If the cylinder mounting surfaces are not measured accurately, using a side support may cause poor operation. Therefore, be sure to level the cylinder tube when mounting. Also, for long stroke operation involving vibration and impact, use of a side support is recommended even if the spacing value is within the allowable limits shown in the graph.
2. Support brackets are not for mounting; use them solely for providing support.

# Series MY1C

## Cam Follower Guide Type

Ø 16, Ø 20, Ø 25, Ø 32, Ø 40, Ø 50, Ø 63

# Series MY1C Prior to Use

## Maximum Allowable Moment/Maximum Load Mass

Model	Bore size [mm]	Maximum allowable moment [N·m]			Maximum load mass [kg]		
		M <sub>1</sub>	M <sub>2</sub>	M <sub>3</sub>	m <sub>1</sub>	m <sub>2</sub>	m <sub>3</sub>
MY1C	16	6.0	3.0	2.0	18	7	2.1
	20	10	5.0	3.0	25	10	3
	25	15	8.5	5.0	35	14	4.2
	32	30	14	10	49	21	6
	40	60	23	20	68	30	8.2
	50	115	35	35	93	42	11.5
	63	150	50	50	130	60	16

The above values are the maximum allowable values for moment and load. Refer to each graph regarding the maximum allowable moment and maximum allowable load for a particular piston speed.

### Maximum Allowable Moment

Select the moment from within the range of operating limits shown in the graphs. Note that the maximum allowable load value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the allowable load for the selected conditions.

### Load mass (kg)

### Moment (N·m)

### <Calculation of guide load factor>

1. Maximum allowable load (1), static moment (2), and dynamic moment (3) (at the time of impact with stopper) must be examined for the selection calculations.

\* To evaluate, use  $\bar{v}$  (average speed) for (1) and (2), and  $v$  (collision speed  $v = 1.4\bar{v}$ ) for (3). Calculate  $m_{\max}$  for (1) from the maximum allowable load graph ( $m_1, m_2, m_3$ ) and  $M_{\max}$  for (2) and (3) from the maximum allowable moment graph ( $M_1, M_2, M_3$ ).

$$\text{Sum of guide load factors } \Sigma\alpha = \frac{\text{Load mass [m]}}{\text{Maximum allowable load [m}_{\max}\text{]}} + \frac{\text{Static moment [M]}^{(1)}}{\text{Allowable static moment [M}_{\max}\text{]}} + \frac{\text{Dynamic moment [ME]}^{(2)}}{\text{Allowable dynamic moment [ME}_{\max}\text{]}} \leq 1$$

Note 1) Moment caused by the load, etc., with cylinder in resting condition.

Note 2) Moment caused by the impact load equivalent at the stroke end (at the time of impact with stopper).

Note 3) Depending on the shape of the workpiece, multiple moments may occur. When this happens, the sum of the load factors ( $\Sigma\alpha$ ) is the total of all such moments.

### Maximum Load Mass

Select the load from within the range of limits shown in the graphs. Note that the maximum allowable moment value may sometimes be exceeded even within the operating limits shown in the graphs. Therefore, also check the allowable moment for the selected conditions.

### 2. Reference formula [Dynamic moment at impact]

Use the following formulae to calculate dynamic moment when taking stopper impact into consideration.

**m:** Load mass (kg)

**F:** Load (N)

**F<sub>E</sub>:** Load equivalent to impact (at impact with stopper) (N)

**$\bar{v}$ a:** Average speed (mm/s)

**M:** Static moment (N·m)

$v = 1.4\bar{v}$ a (mm/s)  $F_E = 1.4\bar{v}$ a ·  $\delta$  · m · g

$\therefore M_E = \frac{1}{3} \cdot F_E \cdot L_1 = 4.57\bar{v}$ a $\delta$ mL<sub>1</sub> (N·m)

**v:** Collision speed (mm/s)

**L<sub>1</sub>:** Distance to the load's centre of gravity (m)

**M<sub>E</sub>:** Dynamic moment (N·m)

**$\delta$ :** Damper coefficient At collision:  $v = 1.4\bar{v}$ a

With rubber bumper = 4/100

(MY1B10, MY1H10)

With air cushion = 1/100

With shock absorber = 1/100

**g:** Gravitational acceleration (9.8 m/s<sup>2</sup>)

Note 4)  $1.4\bar{v}$ a $\delta$  is a dimensionless coefficient for calculating impact force.

Note 5) Average load coefficient ( $= \frac{1}{3}$ ): This coefficient is for averaging the maximum load moment at the time of stopper impact according to service life calculations.

3. For detailed selection procedures, refer to pages 56 and 57.

**MY1C/M<sub>1</sub>**

**MY1C/M<sub>2</sub>**

**MY1C/M<sub>3</sub>**

**MY1C/m<sub>1</sub>**

**MY1C/m<sub>2</sub>**

**MY1C/m<sub>3</sub>**

# Series MY1C Model Selection

Following are the steps for selecting the most suitable Series MY1C to your application.

## Calculation of Guide Load Factor

### 1. Operating Conditions

Cylinder..... MY1C40-500  
Average operating speed  $v_a$  ... 300 mm/s  
Mounting orientation..... Ceiling mounting  
Cushion..... Air cushion  
( $\delta = 1/100$ )

For actual examples of calculation for each orientation, refer to the pages above.

### 2. Load Blocking

#### Mass and Centre of Gravity for Each Workpiece

Workpiece no. W <sub>n</sub>	Mass m <sub>n</sub>	Centre of gravity		
		X-axis X <sub>n</sub>	Y-axis Y <sub>n</sub>	Z-axis Z <sub>n</sub>
W <sub>a</sub>	0.88 kg	65 mm	0 mm	5 mm
W <sub>b</sub>	4.35 kg	150 mm	0 mm	42.5 mm
W <sub>c</sub>	0.795 kg	150 mm	111 mm	42.5 mm
W <sub>d</sub>	0.5 kg	150 mm	210 mm	42.5 mm

n=a, b, c, d

### 3. Composite Centre of Gravity Calculation

$$m_2 = \sum m_n$$

$$= 0.88 + 4.35 + 0.795 + 0.5 = \mathbf{6.525 \text{ kg}}$$

$$X = \frac{1}{m_2} \times \sum (m_n \times x_n)$$

$$= \frac{1}{6.525} (0.88 \times 65 + 4.35 \times 150 + 0.795 \times 150 + 0.5 \times 150) = \mathbf{138.5 \text{ mm}}$$

$$Y = \frac{1}{m_2} \times \sum (m_n \times y_n)$$

$$= \frac{1}{6.525} (0.88 \times 0 + 4.35 \times 0 + 0.795 \times 111 + 0.5 \times 210) = \mathbf{29.6 \text{ mm}}$$

$$Z = \frac{1}{m_2} \times \sum (m_n \times z_n)$$

$$= \frac{1}{6.525} (0.88 \times 5 + 4.35 \times 42.5 + 0.795 \times 42.5 + 0.5 \times 42.5) = \mathbf{37.4 \text{ mm}}$$

### 4. Calculation of Load Factor for Static Load

m<sub>2</sub>: Mass

m<sub>2</sub> max (from (1) of graph MY1C/m<sub>2</sub>) = 30 (kg).....

$$\text{Load factor } \alpha_1 = m_2 / m_{2 \text{ max}} = 6.525 / 30 = \mathbf{0.22}$$

M<sub>1</sub>: Moment

M<sub>1</sub> max (from (2) of graph MY1C/M<sub>1</sub>) = 60 (N·m).....

$$M_1 = m_2 \times g \times X = 6.525 \times 9.8 \times 138.5 \times 10^{-3} = \mathbf{8.86 \text{ (N·m)}}$$

$$\text{Load factor } \alpha_2 = M_1 / M_{1 \text{ max}} = 8.86 / 60 = \mathbf{0.15}$$

**M<sub>2</sub>**: Moment

**M<sub>2</sub> max** (from (3) of graph MY1C/M<sub>2</sub>) = 23.0 (N·m).....

**M<sub>2</sub>** = **m<sub>2</sub>** × **g** × **Y** = 6.525 × 9.8 × 29.6 × 10<sup>-3</sup> = 1.89 (N·m)

Load factor **α<sub>3</sub>** = **M<sub>2</sub>/M<sub>2</sub> max** = 1.89/23.0 = **0.08**

## 5. Calculation of Load Factor for Dynamic Moment

**Equivalent load F<sub>E</sub> at impact**

**F<sub>E</sub>** = 1.4v<sub>a</sub> × δ × m × g = 1.4 × 300 ×  $\frac{1}{100}$  × 6.525 × 9.8 = 268.6 (N)

**M<sub>1E</sub>**: Moment

**M<sub>1E</sub> max** (from (4) of graph MY1C/M<sub>1</sub> where 1.4v<sub>a</sub> = 420 mm/s) = 42.9 (N·m).....

**M<sub>1E</sub>** =  $\frac{1}{3} \times F_E \times Z = \frac{1}{3} \times 268.6 \times 37.4 \times 10^{-3} = 3.35$  (N·m)

Load factor **α<sub>4</sub>** = **M<sub>1E</sub>/M<sub>1E</sub> max** = 3.35/42.9 = **0.08**

**M<sub>3E</sub>**: Moment

**M<sub>3E</sub> max** (from (5) of graph MY1C/M<sub>3</sub> where 1.4v<sub>a</sub> = 420 mm/s) = 14.3 (N·m).....

**M<sub>3E</sub>** =  $\frac{1}{3} \times F_E \times Y = \frac{1}{3} \times 268.6 \times 29.6 \times 10^{-3} = 2.65$  (N·m)

Load factor **α<sub>5</sub>** = **M<sub>3E</sub>/M<sub>3E</sub> max** = 2.65/14.3 = **0.19**

## 6. Sum and Examination of Guide Load Factors

$\Sigma\alpha = \alpha_1 + \alpha_2 + \alpha_3 + \alpha_4 + \alpha_5 = 0.72 \leq 1$

The above calculation is within the allowable value, and therefore the selected model can be used.

Select a shock absorber separately.

In an actual calculation, when the total sum of guide load factors α in the formula above is more than 1, consider either decreasing the speed, increasing the bore size, or changing the product series. This calculation can be easily made using the "SMC Pneumatics CAD System".

-XC67	NBR rubber lining in dust seal band
-XC56	Knock pins holes
20-	Cooper-free

## Specifications

Bore size [mm]		16	20	25	32	40	50	63
Fluid		Air						
Action		Double acting						
Operating pressure range		0.15 to 0.8 MPa		0.1 to 0.8 MPa				
Proof pressure		1.2 MPa						
Ambient and fluid temperature		5 to 60 °C						
Cushion		Air cushion						
Lubrication		Non-lube						
Stroke length tolerance		1000 or less <sup>+1,8 0</sup> 1001 to 3000 <sup>+2,8 0</sup>		2700 or less <sup>+1,8 0</sup> , 2701 to 5000 <sup>+2,8 0</sup>				
Piping port size	Front/Side port	M5 x 0.8		Rc 1/8		Rc 1/4	Rc 3/8	
	Bottom port	Ø 4		Ø 6		Ø 8	Ø 10	

## Piston Speed

Bore size [mm]	16 to 63
Without stroke adjustment unit	100 to 1000 mm/s
Stroke adjustment unit	A unit
	L unit and H unit
	100 to 1000 mm/s <sup>(1)</sup> 100 to 1500 mm/s <sup>(2)</sup>

Note 1) Be aware that when the stroke adjustment range is increased by manipulating the adjustment bolt, the air cushion capacity decreases. Also, when exceeding the air cushion stroke ranges on page 62, the piston speed should be 100 to 200 mm per second.

Note 2) The piston speed is 100 to 1000 mm/s for centralised piping.

Note 3) Use at a speed within the absorption capacity range. Refer to page 62.

## Shock Absorbers for L and H Units

Type	Stroke adjustment unit	Bore size [mm]						
		16	20	25	32	40	50	63
Standard (Shock absorber/ RB series)	L	RB0806		RB1007	RB1412		RB2015	
	H	—	RB1007	RB1412	RB2015		RB2725	
Shock absorber/ soft type RJ series mounted (-XB22)	L	RJ0806H		RJ1007H	RJ1412H		—	—
	H	—	RJ1007H	RJ1412H	—	—	—	—

\* The shock absorber service life is different from that of the MY1C cylinder depending on operating conditions. Refer to the RB Series Specific Product Precautions for the replacement period.

\* Mounted shock absorber soft type RJ series (-XB22) is made to order specifications.

## Shock Absorber Specifications

Model		RB 0806	RB 1007	RB 1412	RB 2015	RB 2725
Max. energy absorption [J]		2.9	5.9	19.6	58.8	147
Stroke absorption [mm]		6	7	12	15	25
Max. collision speed [mm/s]		1500				
Max. operating frequency [cycle/min]		80	70	45	25	10
Spring force [N]	Extended	1.96	4.22	6.86	8.34	8.83
	Retracted	4.22	6.86	15.98	20.50	20.01
Operating temperature range [°C]		5 to 60				

\* The shock absorber service life is different from that of the MY1C cylinder depending on operating conditions. Refer to the RB Series Specific Product Precautions for the replacement period.

# Series MY1C

## Theoretical Output

Bore size [mm]	Piston area [mm <sup>2</sup> ]	Operating pressure [MPa]						
		0.2	0.3	0.4	0.5	0.6	0.7	0.8
16	200	40	60	80	100	120	140	160
20	314	62	94	125	157	188	219	251
25	490	98	147	196	245	294	343	392
32	804	161	241	322	402	483	563	643
40	1256	251	377	502	628	754	879	1005
50	1962	392	588	784	981	1177	1373	1569
63	3115	623	934	1246	1557	1869	2180	2492

Note) Theoretical output (N) = Pressure (MPa) x Piston area (mm<sup>2</sup>)

## Weight

Bore size [mm]	Basic weight	Additional weight per each 50 mm of stroke	Weight of moving parts	Side support bracket weight (per set)	Stroke adjustment unit weight (per unit)		
				Type A and B	A unit weight	L unit weight	H unit weight
16	0.67	0.12	0.22	0.01	0.03	0.04	—
20	1.06	0.15	0.31	0.02	0.04	0.05	0.08
25	1.58	0.24	0.41	0.02	0.07	0.11	0.18
32	3.14	0.37	0.86	0.04	0.14	0.23	0.39
40	5.60	0.52	1.49	0.08	0.25	0.34	0.48
50	10.14	0.76	2.59	0.08	0.36	0.51	0.81
63	16.67	1.10	4.26	0.17	0.68	0.83	1.08

Calculation: (Example) MY1C25-300A

- Basic weight..... 1.58 kg
- Cylinder stroke ..... 300 stroke
- Additional weight..... 0.24/50 stroke  
1.58 + 0.24 x 300/50 + 0.07 x 2 = 3.16 kg
- Weight of A unit..... 0.07 kg

### Side Support Part No.

Type \ Bore size [mm]	16	20	25	32	40	50	63
Side support A	MY-S16A	MY-S20A	MY-S25A	MY-S32A	MY-S40A		MY-S63A
Side support B	MY-S16B	MY-S20B	MY-S25B	MY-S32B	MY-S40B		MY-S63B

For details about dimensions, etc., refer to page 71.  
A set of side supports consists of a left support and a right support.

## Cushion Capacity

### Cushion Selection

#### <Air cushion>

Air cushions are a standard feature on mechanically jointed rodless cylinders.

The air cushion mechanism is incorporated to prevent excessive impact of the piston at the stroke end during high speed operation. The purpose of air cushion, thus, is not to decelerate the piston near the stroke end.

The ranges of load and speed that air cushions can absorb are within the air cushion limit lines shown in the graphs.

#### <Stroke adjustment unit with shock absorber>

Use this unit when operating with a load or speed exceeding the air cushion limit line, or when cushioning is necessary because the cylinder stroke is outside of the effective air cushion stroke range due to stroke adjustment.

#### L unit

Use this unit when the cylinder stroke is outside of the effective air cushion range even if the load and speed are within the air cushion limit line, or when the cylinder is operated in a load and speed range above the air cushion limit line or below the L unit limit line.

#### H unit

Use this unit when the cylinder is operated in a load and speed range above the L unit limit line and below the H unit limit line.

## ⚠ Caution

1. Refer to the figure below when using the adjustment bolt to perform stroke adjustment.

When the effective stroke of the shock absorber decreases as a result of stroke adjustment, the absorption capacity decreases dramatically. Secure the adjustment bolt at the position where it protrudes approximately 0.5 mm from the shock absorber.

2. Do not use a shock absorber together with air cushion.

### Air Cushion Stroke

[mm]

Bore size [mm]	Cushion stroke
16	12
20	15
25	15
32	19
40	24
50	30
63	37

### Absorption Capacity of Air Cushion and Stroke Adjustment Units

#### MY1C16

Horizontal collision: P = 0.5 MPa

#### MY1C32

Horizontal collision: P = 0.5 MPa

63	A	27.5
	L	
	H	

### Tightening Torque for Stroke Adjustment Unit Lock Plate Holding Bolts

Bore size [mm]	Unit	Tightening torque [N·m]
25	L	1.2
	H	3.3
32	L	3.3
	H	10
40	L	3.3
	H	10

### Calculation of Absorbed Energy for Stroke Adjustment Unit with Shock Absorber

Type of impact	Horizontal collision	Vertical (Downward)	Vertical (Upward)
			
Kinetic energy $E_1$		$\frac{1}{2} m \cdot v^2$	
Thrust energy $E_2$	$F \cdot s$	$F \cdot s + m \cdot g \cdot s$	$F \cdot s - m \cdot g \cdot s$
Absorbed energy $E$	$E_1 + E_2$		

Symbol

$v$ : Speed of impact object (m/s)

$F$ : Cylinder thrust (N)

$s$ : Shock absorber stroke (m)

$m$ : Mass of impact object (kg)

$g$ : Gravitational acceleration (9.8 m/s<sup>2</sup>)

Note) The speed of the impact object is measured at the time of impact with the shock absorber.

## ⚠ Precautions

### Specific products precautions

## ⚠ Caution

Use caution not to get your hands caught in the unit.

- When using a product with stroke adjustment unit, the space between the slide table (slider) and the stroke adjusting unit becomes narrow at the stroke end, causing a danger of hands getting caught. Install a protective cover to prevent direct contact with the human body.

### <Fastening of unit>

The unit can be secured by evenly tightening the four unit holding bolts.

## ⚠ Caution

Do not operate with the stroke adjustment unit fixed in an intermediate position.

When the stroke adjusting unit is fixed in an intermediate position, slippage can occur depending on the amount of energy released at the time of an impact. In such cases, as a stroke adjustment unit with the spacer for intermediate securing is available, it is recommended to use it.

For other lengths, please consult with SMC (Refer to "Tightening Torque for Stroke Adjustment Unit Holding Bolts".)

### <Stroke adjustment with adjusting bolt>

Loosen the adjusting bolt lock nut, and adjust the stroke from the lock plate side using a hexagon wrench. Retighten the lock nut.

### <Stroke adjustment with shock absorber>

Loosen the two lock plate holding bolts, turn the shock absorber and adjust the stroke. Then, uniformly tighten the lock plate holding bolts to secure the shock absorber.

Take care not to over-tighten the holding bolts. (Except Ø 16, Ø 20, Ø 50, Ø 63)

(Refer to "Tightening Torque for Stroke Adjustment Unit Lock Plate Holding Bolts".)

Note) Although the lock plate may slightly bend due to tightening of the lock plate holding bolt, this does not affect the shock absorber and locking function.

\* Seal kit includes 25, 29, 30, 31 and 43. Order the seal kit based on each bore size.

\* Seal kit includes a grease pack (10 g).

When 15 and 16 are shipped independently, a grease pack is included. (10 g per 1000 strokes)

Order with the following part number when only the grease pack is needed.

Grease pack part number: GR-S-010 (10 g), GR-S-020 (20 g)

Note) Two kinds of dust seal bands are available. Verify the type to use, since the part number varies depending on the treatment of the hexagon socket head set screw 37.

A: Black zinc chromated → MY□□-16B-stroke, B: Nickel plated → MY□□-16BW-stroke

\* A set of side supports consists of a left support and a right support.

## Guide for Side Support Application

For long stroke operation, the cylinder tube may be deflected depending on its own weight and the load weight. In such a case, use a side support in the middle section. The spacing (L) of the support must be no more than the values shown in the graph on the right.

### ⚠ Caution

1. If the cylinder mounting surfaces are not measured accurately, using a side support may cause poor operation. Therefore, be sure to level the cylinder tube when mounting. Also, for long stroke operation involving vibration and impact, use of a side support is recommended even if the spacing value is within the allowable limits shown in the graph.
2. Support brackets are not for mounting; use them solely for providing support.

### Auto Switch Specifications

#### D-A90, D-A90V (without indicator light)

Auto switch part no.	D-A90	D-A90V
Electrical entry direction	In-line	Perpendicular
Applicable load	IC circuit, Relay, PLC	
Load voltage	24 V $\overline{AC}$ or less	100 V $\overline{AC}$ or less
Maximum load current	50 mA	20 mA
Contact protection circuit	None	
Internal voltage drop	1 or less (including lead wire length of 3 m)	

#### D-A93, A93V, D-A96, A96V (with indicator light)

Auto switch part no.	D-A93	D-A93V	D-A96	D-A96V
Electrical entry direction	In-line	Perpendicular	In-line	Perpendicular
Applicable loads	Relay, PLC			
Load voltage	24 V DC	100 V AC	24 V DC	100 V AC
Load current range and max. load current	5 to 40 mA	5 to 20 mA	5 to 40 mA	5 to 20 mA
Contact protection circuit	None			
Internal voltage drop	2.4 V or less (to 20 mA) 3 V or less (to 40 mA)	2.7 V or less		0.8 V or less
Indicator light	Red LED lights up when ON			

- Lead wires — Heavy duty oil resistant vinyl cord,  $\varnothing$  2.7, 0.5 m  
D-A90(V), D-A93(V) 0.18 mm<sup>2</sup> x 2 wire (Brown, Blue [Red, Black])  
D-A96(V) 0.15 mm<sup>2</sup> x 3 wire (Brown, Black, Blue [Red, White, Black])
- Insulation resistance — 50 M $\Omega$  or more at 500 V DC (between lead wire and case)
- Withstand voltage — 1000 V AC for 1 min. (between lead wire and case)
- Operating time — 1.2 ms
- Impact resistance — 300 m/s<sup>2</sup>
- Enclosure — IEC529 standard IP67, watertight (JISC0920)
- Ambient temperature — -10 to 60 °C
- Leakage current — None

• For a lead wire length of 3 m, "L" is shown at the end of the part number. Example) D-A90L

### Auto Switch Specifications

#### D-Z7□ (with indicator light)

Auto switch part no.	D-Z73		D-Z76
Electrical entry direction	In-line		
Applicable load	Relay, PLC		IC circuit
Load voltage	24 V DC	100 V AC	4 to 8 V DC
Load current range and max. load current	5 to 40 mA	5 to 20 mA	20 mA
Contact protection circuit	None		
Internal voltage drop	2.4 V or less (to 20 mA)/3 V or less (to 40 mA)		0.8 V or less
Indicator light	Red LED lights up when ON		

#### D-Z80 (without indicator light)

Auto switch part no.	D-Z80		
Electrical entry direction	In-line		
Applicable load	Relay, PLC, IC circuit,		
Load voltage	24 V $\frac{AC}{DC}$ or less	48 V $\frac{AC}{DC}$ or less	100 V $\frac{AC}{DC}$ or less
Maximum load current	50 mA	40 mA	20 mA
Contact protection circuit	None		
Internal voltage drop	1 or less (including lead wire length of 3 m)		

- Leakage current — None
  - Operating time — 1.2 ms
  - Lead wires — Heavy duty oil resistant vinyl cord,  $\varnothing$  3.4, 0.2 mm<sup>2</sup>, 2 wire (Brown, Blue [Red, Black]), 3 wire (Brown, Black, Blue [Red, White, Black]), 0.5 m\* D-Z73 only  $\varnothing$  2.7, 0.18 mm<sup>2</sup>, 2 wire)
  - Impact resistance — 300 m/S<sup>2</sup>
  - Insulation resistance — 50 M $\Omega$  or more at 500 V DC (between lead wire and case)
  - Withstand voltage — 1500 V AC for 1 min. (between lead wire and case)
  - Ambient temperature — -10 to 60 °C
  - Enclosure — IEC529 standard IP67, watertight (JISC0920)
- \* For a lead wire length of 3 m, "L" is shown at the end of the part number. Example) D-Z73L

### Dimensions

#### D-Z73

#### D-Z76, Z80

Bore size	Bore size [mm]	
Operating range	180	200
Operating range $\ell$ [mm]	15	15

Note) There is a guide including hysteresis, but is not guaranteed.  
There may be large variations (as much as 30 %) depending on the ambient environment.

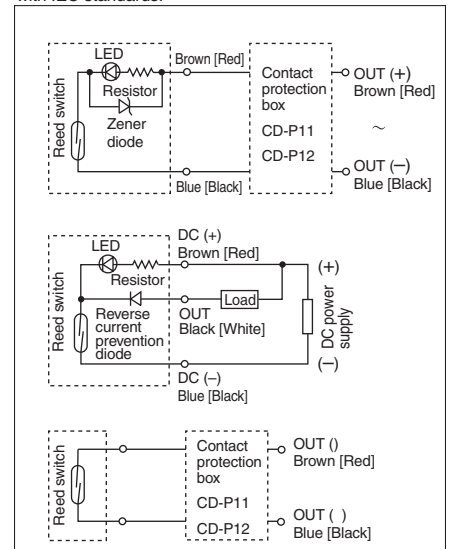

### Weight

Unit: g

Model	Lead wire length 0.5m	Lead wire length 3m
D-Z73	7	31
D-Z76	10	55
D-Z80	9	49

### Auto switch internal circuits

Lead wire colours inside ( ) are those prior to conformity with IEC standards.

### Contact Protection Boxes/CD-P11, CD-P12

D-Z7□ and D-Z80□ type switches do not have internal contact protection circuits.

1. The operated load is an induction load.
  2. The length of wiring to the load is 5 m or more.
  3. The load voltage is 100 V AC.
- A contact protection box should be used in any of the above situations.

#### Contact protection box specifications

Part No.	CD-P11	CD-P12
Load voltage	100 V AC	24 V DC
Max. load current	25 mA	50 mA

D-280 type switches are 100 V AC or less. Since there is no particular specified voltage, select a type based on the operating voltage.

#### Contact protection box internal circuits

Lead wire colours inside ( ) are those prior to conformity with IEC standards.

	A	B
Bore size		
50	290.5	123.5
63	335.5	138.5

Note) Adjust the auto switch after confirming the operating condition in the actual setting.

### How to Mount the Auto Switch (For MY1HT)

When attaching an auto switch, first take a switch spacer between your fingers and press it into a switch mounting groove. When doing this, confirm that it is set in the correct mounting orientation, or reattach if necessary.

Next, insert an auto switch into the groove and slide it until it is positioned under the switch spacer.

After establishing the mounting position, use a watchmaker's flat head screwdriver to tighten the auto switch mounting screw which is included.

Note) When tightening an auto switch mounting screw, use a watchmaker's screwdriver with a grip diameter of 5 to 6 mm. Also, tighten with a torque of about 0.05 to 0.1 N·m. As a guide, it should be turned about 90° past the point at which tightening can be felt.

#### Switch Spacer No.

Cylinder series	Applicable bore size [mm]	
	50	63
MY1HT	BMP1-032	

## Operating Range

Note) Since this is a guideline including hysteresis, not meant to be guaranteed. (Assuming approximately  $\pm 30\%$  dispersion.)  
There may be the case it will vary substantially depending on an ambient environment.

## 5 Magnet for ø10 Solid State Auto Switch Specifications

Symbol  
**-X1810**

By incorporating the use of the magnet for solid state auto switches, switch operation stability can be achieved.

\* If you are using, or planning to use, the cylinder in combination with a solid state auto switch, but are currently only ordering the cylinder, please add the "-X1810" suffix to the end of the product number.

MY1 **B** 10G - Stroke -X1810

• Magnet for ø10 solid state auto switch specifications

• Type

<b>B</b>	Basic
<b>H</b>	Linear guide

• Stroke adjustment unit

\* If an auto switch is included in the product number, the "-X1810" suffix does not need to be added to the end of the product number.

Example) MY1B10G-300H-M9BL

## Mounting

### ⚠ Caution

#### 1. Do not apply strong impact or excessive moment to the slide table (slider)

- Since the slide table (slider) is supported by precision bearings (MY1C, MY1H) or resin bearings, do not subject it to strong impact or excessive moment when mounting work pieces.

#### 2. Perform careful alignment when connecting to a load which has an external guide mechanism.

- Mechanically jointed rodless cylinders can be used with a direct load within the allowable range for each type of guide, but careful alignment is necessary for connection to a load which has an external guide mechanism.

Since fluctuation of the centre axis increases as the stroke becomes longer, use a method of connection which can absorb the variations (floating mechanism).

Furthermore, use the special floating brackets, which have been provided for series MY1B.

#### 3. Avoid use in environments where a cylinder will come in contact with coolants, cutting oil, water, adhesive matter, or dust, etc. Also avoid operation with compressed air that contains drainage or foreign matter, etc.

- Foreign matter or liquids on the cylinder's interior or exterior can wash out the lubricating grease, which can lead to deterioration and damage of dust seal band and seal materials, causing a danger of malfunction.

When operating in locations with exposure to water and oil, or in dusty locations, provide protection such as a cover to prevent direct contact with the cylinder, or mount so that the dust seal band surface faces downward, and operate with clean compressed air.

### ⚠ Caution

#### 1. Do not inadvertently move the setting of the guide adjustment unit.

- The guide is already adjusted at the factory, and readjustment is not necessary under normal operating conditions. Therefore, do not inadvertently move the setting of the guide adjustment unit. However, series other than series MY1H allow readjustment and bearing replacement, etc.

In this case, refer to the outline for bearing replacement in the instruction manual.

### ⚠ Caution

#### 1. External air leakage may occur.

- In operating conditions where negative pressure is generated inside the cylinder because of external or inertial forces, etc., take note that external air leakage may occur due to separation of the seal belt.

## ⚠ Caution

### Centralised Piping Port Variations

- Head cover ports can be freely selected to best suit different situations.

Applicable cylinder	Port variations

## Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of “Caution,” “Warning” or “Danger.” They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC)\*1), and other safety regulations.

- Caution:** Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate injury.
- Warning:** Warning indicates a hazard with a medium level of risk which, if not avoided, could result in death or serious injury.
- Danger:** Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious injury.

### Warning

- The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.**  
Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.
- Only personnel with appropriate training should operate machinery and equipment.**  
The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.
- Do not service or attempt to remove product and machinery/equipment until safety is confirmed.**
  - The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
  - When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
  - Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
- Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.**
  - Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
  - Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalogue.
  - An application which could have negative effects on people, property, or animals requiring special safety analysis.
  - Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

### Caution

- The product is provided for use in manufacturing industries.**  
The product herein described is basically provided for peaceful use in manufacturing industries.  
If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary.  
If anything is unclear, contact your nearest sales branch.

### Caution

- SMC products are not intended for use as instruments for legal metrology.**  
Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.

## Safety Instructions

Be sure to read “Handling Precautions for SMC Products” (M-E03-3) before using.

## Limited warranty and Disclaimer/ Compliance Requirements

The product used is subject to the following “Limited warranty and Disclaimer” and “Compliance Requirements”.  
Read and accept them before using the product.

### Limited warranty and Disclaimer

- The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first.\*2)  
Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided.  
This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.

\*2) Vacuum pads are excluded from this 1 year warranty.  
A vacuum pad is a consumable part, so it is warranted for a year after it is delivered.  
Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

### Compliance Requirements

- The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.
