## ⚠ Precautions

Be sure to read before handling. Refer to p.0-33 to 0-36 for Safety Instructions and common precautions.

### ⚠ Warning

#### Selection

##### 1. Air quality

This product is for dry air. Drain, oil, etc. in the air may result in faulty operation. Use clean (dry) air.

##### 2. Pressure differential

If a restrictor (nozzle, etc.) is mounted on the outlet side, the outlet side pressure differential at the inlet side is smaller.

Be sure the pressure differential when ON does not drop below 0.01 MPa.

### ⚠ Warning

#### Manual Override

Regardless of electric signals to the solenoid valve, the manual override is used for switching the main valve. (DIN connector only.)

##### Locking slotted style

Push the manual override button with a small screw driver until it stops. Turn it in the counter-clockwise direction at 90°, and it is locked. Turn it right to release.

### ⚠ Caution

#### Connection and Electrical Circuit

##### With DC voltage power-saving circuit (with polarity)

Lead wire color DIN connector

DC (with power-saving circuit) specifications is designed to reduce the power consumption at holding to achieve power-saving by circuit shown above. Refer to below power wave form.

### ⚠ Caution

#### Connection and Electrical Circuit

##### Power wave form of power-saving type (Rated voltage at 24 VDC)

##### AC circuit

Lead wire color DIN connector

### ⚠ Caution

#### Valve Mounting

When mounting the valve, secure with brackets. When mounting it directly, tighten the mounting screws with the appropriate torque (0.7 to 0.8 N·m).

### ⚠ Caution

#### When Energizing Continuously for Long Period of Time

When energizing continuously, choose the option of an energy-saving circuit specifications. High speed response type (with no energy-saving circuit) cannot be energized continuously.

## How to Wire DIN Terminal

### ⚠ Caution

ISO#: Based on DIN 43650C (Pin gap 8 mm)

#### Connection

1. Loosen the tightening screw and pull the connector off of the solenoid valve.
2. After removing the tightening screw, divide the terminal block and housing by prying open the slot area of the lower part of the terminal block open with a screwdriver.
3. Loosen the terminal screws of the block and insert stripped lead wires in accordance with the wiring diagram. Secure each wire by re-tightening the terminal screw (In the case of terminal 1: (+), 2: (-) DC)
4. Tighten the ground nut to secure the cable wire.

#### Change of electrical entry

Wire entry can be changed by mounting the housing in either direction (four directions at every 90°) after dividing the terminal block and the housing.

\* For the indicator lighted type, be careful not to damage the light with the lead wire of the cable.

#### Precautions

Insert a connector straight or pull it out straight, using caution it does not be tilted.

#### Applicable cable

Cord O.D.:  $\phi 3.5$  to  $\phi 7$

(Reference) 0.5 mm<sup>2</sup> 2-core and 3-core wire equivalent to JIS C 3306.

### How to Mount/Remove from DIN Rail

### ⚠ Caution

#### Removing procedure

1. Loosen the clamp screw on the "A" side of both ends of the manifold.
2. Lift the "A" side of the manifold off the DIN rail and slide it in the direction of the arrow.

#### Mounting procedure

1. Hook the mounting hook on the "B" side of the manifold base to the DIN rail.
2. Press down side "A" and mount the end plate on the DIN rail. Tighten the clamp screw on side "B" of the end plate.

(Tightening torque: 0.3 to 0.4 N·m).

## Valve Mounting

### ⚠ Caution

After confirming the gasket is correctly placed under the valve, tighten the mounting screws with the appropriate torque (0.7 to 0.8 N·m).
