Series AM□/AFF

Dust filtration, Oil mist separation

Micro Mist Separator with Pre-filter

Built-in 0.3 µm pre-filter
The AM + AMD element have been integrated to achieve a space-saving design.
Nominal filtration rating: 0.01 µm
[Filtration efficiency: 99.9%]

Oil mist density at outlet: Max. 0.1 mg/m³ (ANR)

[≈0.08 ppm]

AMH150C to 550C AMH650/850

Dust filtration, Oil mist adsorption

Super Mist Separator

Colour change indicates when element is saturated. Nominal filtration rating: 0.01 μm

[Filtration efficiency: 99.9%]
Oil mist density at outlet:
Max. 0.01 mg/m³ (ANR)
[≈0.008 ppm]
Cleanliness at outlet:
Not more than 35

Not more than 35 particles of size 0.3 µm or larger/10 / (100 particles or less/ft³) AME150C to 550C

Deodorization

Odour Removal Filter

Nominal filtration rating: 0.01 μm [Filtration efficiency: 99.9%]
Oil mist density at outlet:
Max. 0.004 mg/m³ (ANR)
[≈0.0032 ppm]

Water Separator

Series AMG

Can remove water droplets in compressed air. Use this product in cases where "water must be avoided, but not so dry as when an air dryer is used".

Through the adoption of an element that is exclusively used for removing water droplets and the ample housing interior space, a 99%* water removal rate** has been achieved.

⚠ Caution

Water separator can remove water droplets, but it cannot remove moisture.

* Condition of inlet air Pressure: 0.7 MPa

Temperature: 25°C Relative humidity: 100%

Liquid water content (Water droplet

content): 15 g/m3 (ANR)

Compressed air flow: Rated flow of each

mode

** Water removal rate (%) =

Removed water (Water droplet) (g) x 100

Inflowed water (Water droplet) (g)

Modular connection is possible with AMG150C to 550C. (For details, refer to page 58.)

AMG150C to 550C

AMG650/850

Made to Order
(For details, refer to page 63.)

Options

Symbol F: Rubber material: Fluororubber

FKM is used for the parts such as O-ring and gasket.

Symbol R: IN-OUT reversal direction

Air flow in the separator is changed to right to left.

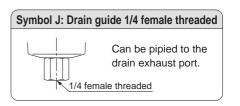

(Air flow direction of the standard: Left

Symbol H: For medium air pressure (1.6 MPa)

Can be used up to 1.6 MPa at maximum.

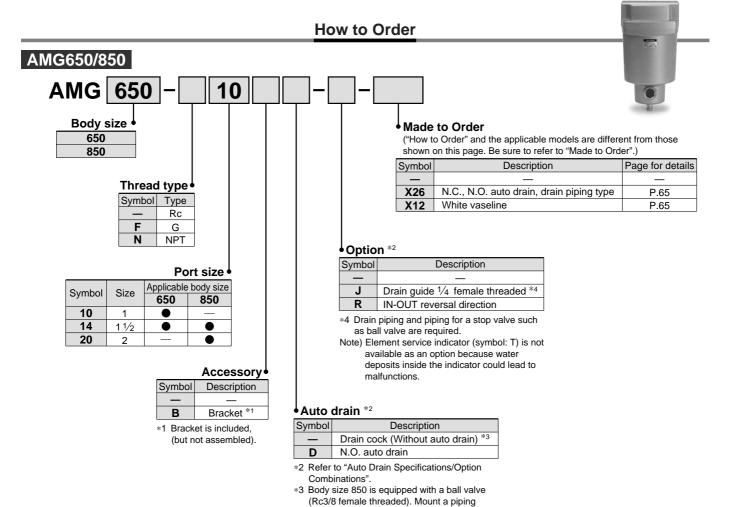

Symbol V: Degreasing wash, white vaseline

Body/housing is degreasing washed. The lubrication grease for O-ring and gasket is changed to white vaseline.

Water Separator Series AMG

Note) Refer to "How to Order Bowl Assembly" on page 63.

Auto Drain Specifications/Option Combinations

- * Refer to back page 6 for replacement of auto drain.
- * Element assemblies for Made to Order (X12, X20, X26) are same as those for standard (see the above table).

Maximum Air Flow

Model Selection

Select a model in accordance with the following procedure taking the inlet pressure and the max. air flow rate into consideration. (Example) Inlet pressure: 0.6 MPa

Max. air flow rate: 5 m³/min (ANR)

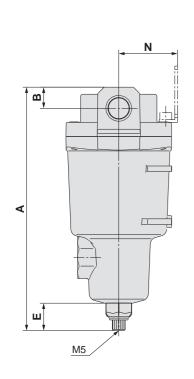

- 1. Obtain the intersecting point A of inlet pressure and max. air flow rate in the graph.
- 2. The AMG650 is obtained when the max. flow line is above the

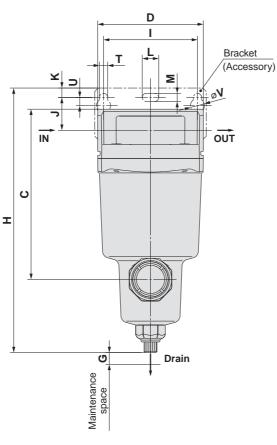

Note) Make sure to select a model that has the max. flow line above the obtained intersecting point. With a model that has the max. flow line below the obtained intersecting point, the flow rate will be exceeded, thus leading to a problem such as being unable to satisfy the specifications.

Maximum Air Flow

Model Selection

Select a model in accordance with the following procedure taking the inlet pressure and the max. air flow rate into consideration. (Example) Inlet pressure: 0.6 MPa

Max. air flow rate: 5 m3/min (ANR)

- 1. Obtain the intersecting point A of inlet pressure and max. air flow rate in the graph.
- 2. The AM650 is obtained when the max. flow line is above the intersecting point A in the graph.

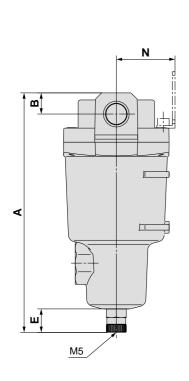

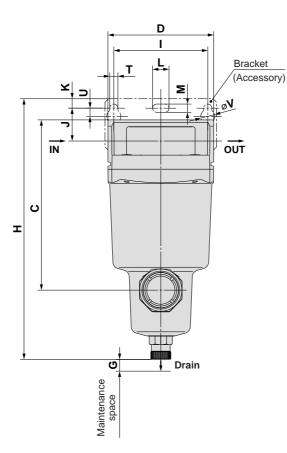

Note) Make sure to select a model that has the max. flow line above the obtained intersecting point. With a model that has the max. flow line below the obtained intersecting point, the flow rate will be exceeded, thus leading to a problem such as being unable to satisfy the specifications.

Micro Mist Separator with Pre-filter Series ANH

Can separate and remove aerosol state oil mist in compressed air and remove particles such as carbon or dust of more than 0.01 m.

Use this product as a pre-filter for compressed air for precision instruments or clean room requiring higher clean air.

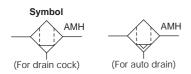

The conventional pneumatic pressure line, AM series + AMD series have been integrated to achieve a reduction in installation space and in piping labor.

Modular connection is possible with AMH150C to 550C. (For details, refer to page 58.)

AMH150C to 550C

AMH650/850

Model

Model	AMH150C	AMH250C	AMH350C	AMH450C	AMH550C	AMH650	AMH850
Note) Rated flow (I/min (ANR))	200	500	1000	2000	3700	6000	12000
Port size	1/8, 1/4	1/4, 3/8	3/8, 1/2	1/2, 3/4	3/4, 1	1, 1 1/2	1½, 2
Mass (kg)	0.38	0.55	0.9	1.4	2.1	4.2	10.5

Note) Max. flow at 0.7 MPa.

Max. flow varies depending on the operating pressure.

Refer to "Flow Characteristics" (page 37) and "Maximum Air Flow" below.

Specifications

Fluid	Compressed air
Max. operating pressure	1.0 MPa
Min. operating pressure*	0.05 MPa
Proof pressure	1.5 MPa
Ambient and fluid temperature	5 to 60°C
Nominal filtration density	0.01 μm (Filtration efficiency: 99.9%)
Oil mist density at outlet	Max. 0.1 mg/m³ (ANR)*
	(Before saturated with oil, less than 0.01 mg/m³ (ANR) 0.008 ppm)
Element life	2 years or when pressure drop reached 0.1 MPa

- * With auto drain: 0.1 MPa (N.O. type) or 0.15 MPa (N.C. type)
- * Oil mist density at 30 mg/m³ (ANR) blown out by compressor.

Accessory

Applicable model	AMH150C	AMH250C	AMH350C	AMH450C	AMH550C	AMH650	AMH850
Bracket assembly (with 2 mounting screws)	AM-BM101	AM-BM102	AM-BM103	AM-BM104	AM-BM105	BM56	BM57

Model Selection

Select a model in accordance with the following procedure taking the inlet pressure and the max. air flow rate into consideration. (Example) Inlet pressure: 0.6 MPa

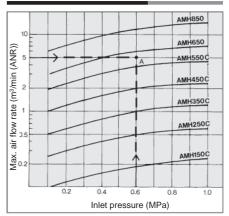

Max. air flow rate: 5 m³/min (ANR)

- Obtain the intersecting point A of inlet pressure and max. air flow rate in the graph.
- 2. The AMH650 is obtained when the max. flow line is above the intersecting point A

Note) Make sure to select a model that has the max. flow line above the obtained intersecting point. With a model that has the max. flow line below the obtained intersecting point, the flow rate will be exceeded, thus leading to a problem such as being unable to satisfy the specifications.

Maximum Air Flow

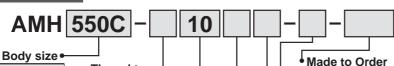

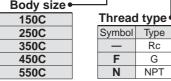

⚠ Caution

- Be sure to read this before handling.
- Refer to back page for Safety Instructions, "Precautions for Handling
- Pneumatic Devices" (M-03-E3A) for Common Precautions, and pages 73 to 77 for Specific Product Precautions.

Options

Symbol F: Rubber material: Fluororubber

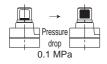

Fluororubber is used for the parts such as O-ring and gasket.

Symbol R: IN-OUT reversal direction

Air flow in the separator is changed to right to left.

(Air flow direction of the standard: Left to right.)

Symbol T: With element service indicator

Saturation of the separator can be observed visually. (Element life check)

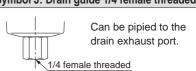

Symbol V: Degreasing wash, white vaseline

Body/housing is degreasing washed. The lubrication grease for O-ring and gasket is changed to white vaseline.

Symbol H: For medium air pressure (1.6 MPa)

Can be used up to 1.6 MPa at maximum.

Symbol J: Drain guide 1/4 female threaded

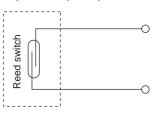

Symbol U: With differential pressure switch (with indicator)

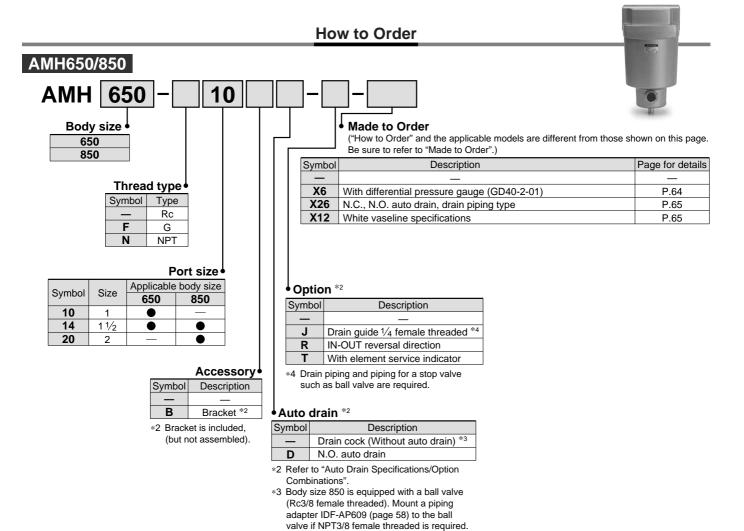

Saturation of the separator can be observed visually or by an electrical signal. (Element life check)

Max. contact capacity: 10 W DC Rated contact voltage (max. operating current): 30 V DC (0.33 A)

Micro Mist Separator with Pre-filter Series AMH

Note) Refer to "How to Order Bowl Assembly" on page 59.

Super Mist Separator

Series AME

Can separate and adsorb aerosol state fine oil particles in compressed air and change the oil lubricating compressed air to oilless air or equivalent.

Use this product for filtration of compressed air requiring higher clean air for painting lines, compressed air for clean rooms and/or equipment where oils must be avoided.

Indicates the filter element life by a colour change. Accordingly, the replacement time can be judged visually. (A red colour spot indicates the replacement time.)

⚠ Caution

By all means the "AM" series should be used as a pre-filter.

Modular connection is possible with AME150C to 550C. (For details, refer to page 58.)

Maximum Air Flow

Model Selection

Select a model in accordance with the following procedure taking the inlet pressure and the max. air flow rate into consideration. (Example) Inlet pressure: 0.6 MPa

Max. air flow rate: 5 m3/min (ANR)

- 1. Obtain the interecting point A of inlet pressure and max. air flow rate in the graph.
- 2. The AME650 is obtained when the max. flow line is above the intersecting point A in the graph.

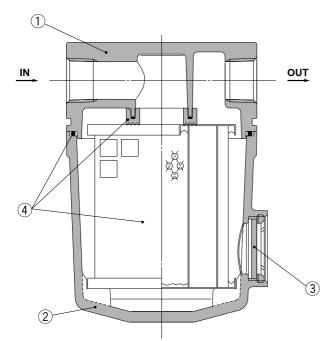

Note) Make sure to select a model that has the max. flow line above the obtained intersecting point. With a model that has the max. flow line below the obtained intersecting point, the flow rate will be exceeded, thus leading to a problem such as being unable to satisfy the specifications.

Odour Removal Filter

Series AMF

Efficiently can remove odour in compressed air with an activated carbon element. The unit is designed for use in the area such as a clean room where odours must be avoided.

Can remove odour and gas ingredients in compressed air.

Activated carbon element with large filtration area.

Easy replacement of elements.

Modular connection is possible with AMF150C to 550C.

(For details, refer to page 58.)

Spacer for Modular Connection

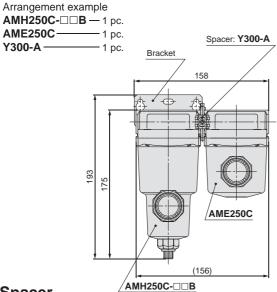

Select a spacer from those listed below when combining modular type AFF2C to 22C, AM□150C to 550C. The spacer must be ordered separately.

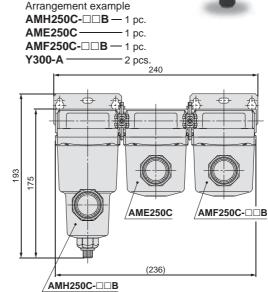

(Note: Spacer with bracket (Y200T-A to Y600T-A) cannot be used.)

Modular connection

- Mount the attached bracket on one side when connecting 2 sets.
- Mount the attached brackets on both sides when connecting 3 sets or more.
- As a guideline for the number of brackets, one bracket should be mounted for every 2 products.

Combination examples of modular applicable products

Bowl Assembly

AM-CA AME-CA

Bowl Assembly

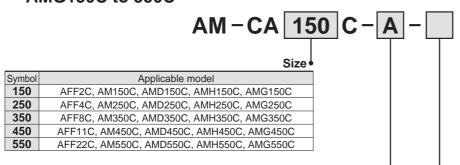

- Use only when replacing the bowl assembly, while the body is connected to the piping.
 - Example) Changing the drain exhaust specification from the drain cock type to the auto drain type.
 - The bowl has been damaged.

(Note: When changing the model due to replacement, the customer is responsible for controlling the model.)

How to Order Bowl Assembly

The "How to Order" the bowl assembly changes with the series and size.

- For AFF, AM, AMD, AMH, AMG series
 - AFF2C to 22C, AM150C to 550C, AMD150C to 550C, AMH150C to 550C, AMG150C to 550C
 - AFF37B, AM650, AMD650, AMH650, AMG650 ————— Based on How to Order ②.
 - AFF75B, AM850, AMD850, AMH850, AMG850 —————Based on How to Order ③.
- For AME, AMF series
 - AME150C to 550C, AMF150C to 550C ———— Based on How to Order 4.
- ① For AFF2C to 22C, AM150C to 550C, AMD150C to 550C, AMH150C to 550C, AMG150C to 550C

Clean Series (10-Series)

Clean Series products are used in cleaner environments such as in clean rooms as compared to a general factory environment. For further details, refer to the Clean Series catalogue.

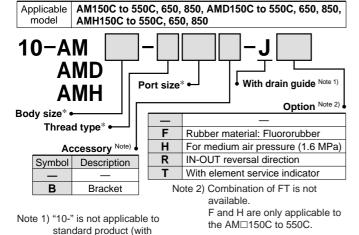

Specifications

Note 1) "10-" is not applicable to standard product (with drain cock) and with auto drain. Note 2) Combination of FT is not available.

F and H are only applicable to the AFF2C to 22C.

Specifications

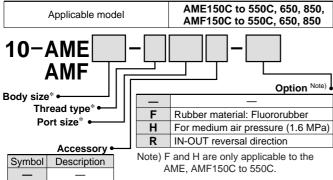

Specifications

В

auto drain.

drain cock) and with

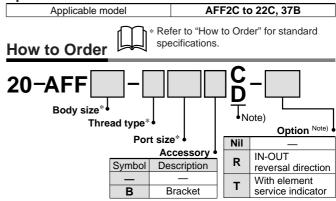

Bracket

Copper-free, Fluorine-free (20-Series)

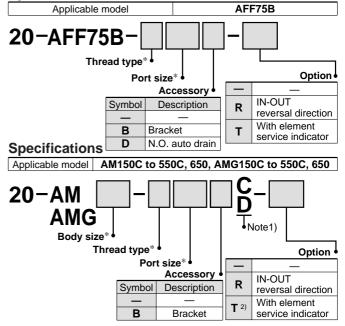

To eliminate effects on colour CRTs, etc. by copper ion or fluorine resin, copper materials are electroless-nickel plated or changed to copper-free materials to prevent the generation of copper ions. (It is not applicable to the AMD, AME, AMF and AMH series because those include fluorine resin in the filter material of the element.)

Specifications

Note) "20-" is only applicable with N.C. auto drain (C) or N.O. auto drain (D). Drain cock and drain guide are copper-free, fluorine-free as standard.

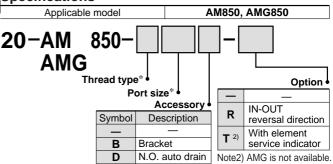

Specifications

Note1) "20-" is only applicable with N.C. auto drain (C) or N.O. auto drain (D). Drain cock and drain guide are copper-free, fluorine-free as standard.

Note2) AMG is not available.

Specifications

Related Products: Auto Drain Valve

Series AD402/600

Drain is automatically discharged in a reliable manner, without requiring human operators.

Highly resistant to dust and corrosion, operates reliably, and a bowl guard is provided as standard equipment.

△ Specific Product Precautions

Be sure to read this before handling.

Refer to back page for Safety Instructions, "Precautions for Handling Pneumatic Devices" (M-03-E3A) for Common Precautions.

Selection

Use the auto drain under the following operating conditions in order to prevent malfunction.

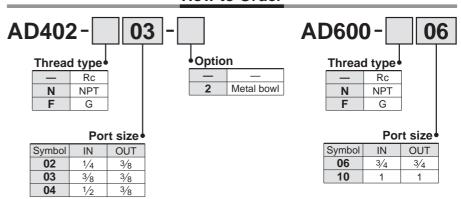

- 1) Operate the compressor above 3.7 kw {400 l/min (ANR)}.
- Use the AD402 at an operating pressure above 0.1 MPa and AD600 above 0.3 MPa

Piping

△ Warning

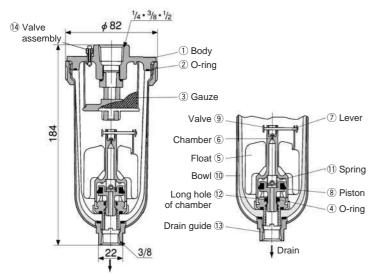

Piping should be done under the following conditions in order to prevent malfunction. For drain piping, use a pipe whose I.D. is not less than Ø10 and length not more than 5 m. Avoid riser piping.

How to Order

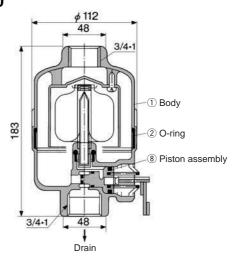

Construction/Dimensions

AD402

AD600

Working Principle (AD402)

- When no pressure is applied inside the bowl ①, float ⑤ descends of its own weight and valve ② closes the chamber ⑥ hole. Piston ⑧ is pushed down by spring ①, and drain passes through the chamber's long hole ② to enter the housing and is discharged.
- When pressure is applied inside the bowl:
 When pressure is 0.1 MPa or more, it overcomes the force of spring ①, allowing the piston ® to ascend, and comes in contact with O-ring ④. Thus, the inside of the bowl ⑩ is isolated from the outside.
- When drain has accumulated:

Float 5 ascends due to flotation and opens the chamber hole 6, allowing the pressure to enter the chamber 6. Piston 8 descends due to internal pressure and the force of spring 1, and the accumulated drain is discharged through drain guide 3.

△ Specific Product Precautions

Be sure to read this before handling. Refer to back page for Safety Instructions, "Precautions for Handling Pneumatic Devices" (M-03-E3A) for Common Precautions.

Design

⚠ Caution

 Use this product in an area where the air pressure does not exceed 1.6 MPa.

If exceeding 1.6 MPa, it could lead to an accident or malfunction.

 An air pressure of 0.05 MPa and an air compressor's discharge flow rates higher than 50 /min (ANR) are required.

Below these values, the air will be exhausted continuously from the drain exhaust port.

- Keep the compressed air and the ambient temperature of the location where this product is installed within the range of 5 to 60°C. Exceeding this range could lead to a failure or malfunction.
- Avoid using this product in an area where corrosive gases, flammable gases or organic solvents are contained in the compressed air or in the surrounding air.

Selection

⚠ Caution

1. The maximum dischargeable drainage rate is 400 cc/min.

If using this product in excess of this value, there could be causing the drain to flow over to the outlet side.

Piping

- Use piping of 1/2^B or larger for drain inlet and avoid riser piping.
- 2. For drain piping, use a pipe whose I.D. is not less than 8 mm and length not more than 10 m. Do not make any upward angles in drain line. Be sure to secure exhaust port piping since drain is under pressure.

Mounting

⚠ Caution

1. Install with "out port" down in a vertical position.

Inclination from the vertical line should be less than 5.

- Install with at least 200 mm of free space above the unit to allow for maintenance.
- **3.** To place this product near the air compressor, install in such a way that the vibrations will not be transmitted.
- 4. Install a valve to drain inlet so that maintenance is possible.

Use a ball valve with a bore size of more than 15 mm. (Ball valve piping set is available as an accessory (option).)

Mounting

∧ Caution

When not draining sufficiently, open the bleed valve so that drain could run through easily.

Maintenance

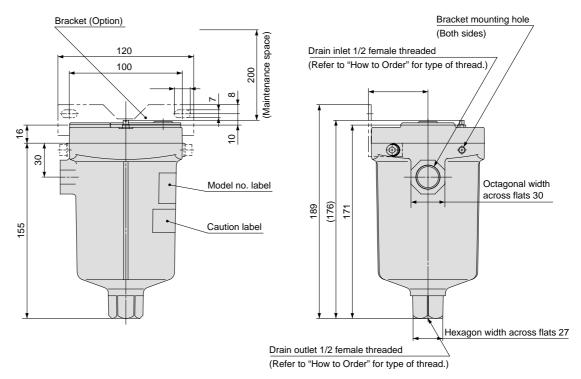

⚠ Caution

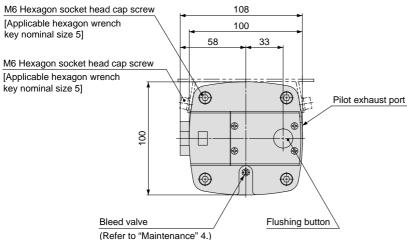

- 1. Check drain condition periodically (more than once a day).
 - Also, push the flushing button to open the exhaust valve.
- Pilot air is exhausted from the exhaust port indicated in "Dimensions". Do not cover this exhaust port. Clean the exhaust port so that port is not blocked by dust, etc.
- 3. When solid foreign objects exceeding 1 mm come in, the main valve may become blocked. After recovering the internal pressure of this product to 0 MPa (atmospheric pressure), remove the hexagon socket head cap screw (M6) from the body part and wash inside with water to remove foreign solid objects blocking the main valve.
- 4. When using this product, drain may not easily enter the product. In such a case, adjust the open angle of its bleed valve to lower the pressure a bit inside the bowl so that drain could run through easily.

⚠ Specific Product Precautions

Be sure to read this before handling.

Refer to back page for Safety Instructions, "Precautions for Handling Pneumatic Devices" (M-03-E3A) for Common Precautions.

Design

⚠ Caution

 This product cannot be used in a location where pulsations could occur frequently.

Mounting

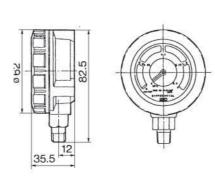

⚠ Caution

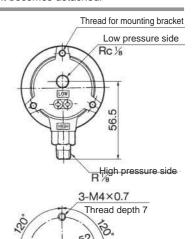

- 1. Mounting
 - 1) The HIGH and LOW marks on the back of the differential pressure gauge indicate the high pressure and low pressure sides respectively. Connect the HIGH side to the inlet side of the filter or other devices and the LOW side to their outlet side. Do not use a stop valve to prevent damage to the differential pressure gauge if the valve is inadvertently left open or closed.
 - 2) Install the differential pressure gauge vertically.
 - The piping of the differential pressure gauge must be connected securely because it will break if it becomes detached.

Piping Example

Dimensions

Be sure to read this before handling. Refer to back page for Safety Instructions.

Design

 Design the layout so that the mist separator should be installed in an area that is less susceptible to pulsations.

The element could be damaged if a difference between the inlet pressure and the outlet pressure exceeds 0.1 MPa.

2. Be careful of dust generation by the pneumatic equipment mounted on the outlet side.

When installing pneumatic equipment on the outlet side of the AMD series, dust particles may come off from outlet equipment, which will lower the cleanliness of compressed air. Consider this impact upon the cleanliness of compressed air when installing pneumatic equipment on the outlet side.

3. About when to use N.C. auto drain and N.O. auto drain.

When using the AFF2C to 22C, 37B, 75B, AM□150C to 550C, 650, 850 with normally open (N.O.) auto drain, air may ceaselessly blow out of the drain discharge area when an air compressor with a small air discharge volume is used since the valve does not close unless the air pressure is 0.1 MPa or higher. Therefore, when using a compressor for 3.7 kW or less, make sure to use the normally closed (N.C.) auto drain. The minimum operating pressure is 0.15 MPa even with N.C. auto drain.

4. Use a tubing with proper size and length for drain piping of auto drain.

When using the AFF2C to 22C, 37B, AM \square 150C to 550C, 650 with auto drain:

Normally closed (N.C.) Normally open (N.O.) Use tubing O.D. 10 mm and keep the whole length within 5 m.

When using the AFF75B and AM□850 with auto drain:

Normally open (N.O.): Use tubing I.D. 9 mm or more and keep the whole length within 2.8 m.

Provide a design that prevents back pressure and back flow.

Back pressure or back flow may damage an element.

⚠ Warning

 Hold the female thread side and tighten to the recommended torque when screwing in the piping material.

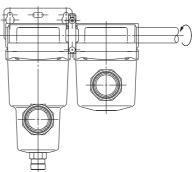

Insufficient tightening torque may cause loosening or defective sealing. Over-tightening torque may damage the thread etc. If it is tightened without holding the female thread side, excessive force will be directly applied to the piping bracket resulting in a product failure.

Recommended Torque

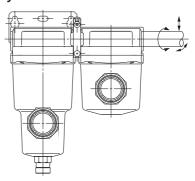

Unit: N⋅m

Connection thread	1/8	1/4	3/8	1/2	3/4	1	1 1/2	2
Torque	1.5 to 2	7 to 9	12 to 14	28 to 30	28 to 30	36 to 38	48 to 50	48 to 50

* After tightening manually, tighten additionally by about 1/6 turn with a tightening tool.

Do not apply torsional moment or bending moment (except the product's own weight) to the bracket. It may damage the bracket. Support external piping separately.

Inflexible piping such as steel piping tends to be affected by spread of excessive moment load or vibration from the piping side. Lay flexible tubing between the steel pipe and the product to prevent such effects.

Be sure to read this before handling. Refer to back page for Safety Instructions.

Selection

⚠ Caution

About the system composition of purifying compressed air

Compressed air generally contains particulate contaminants as listed below, though there are some variations due to the compressor type and specifications. Determine the system configuration according to the desired cleanliness of compressed air and application, while referring to the "Air Preparation Equipment Selection Guide" for the AM□ series (Best Pneumatics).

[Particulate contaminants in compressed air]

- Water (drainage)
- · Dust sucked from ambient air
- Degenerated oil from compressor
- Solid foreign matter such as rust inside piping and oil

2. Select according to the maximum flow consumption.

When compressed air is used for air blow, etc., find the maximum air consumption before selecting the size of the AM \square series. (If compressed air exceeding the maximum flow rate is supplied, it can result in decline of the cleanliness of compressed air or element damage.)

Mounting

∧ Caution

1. About the mounting orientation of the products

Make sure to install this product on horizontal piping. If it is installed diagonally, laterally, or upside down, the drain separated by the element will splash to the outlet side.

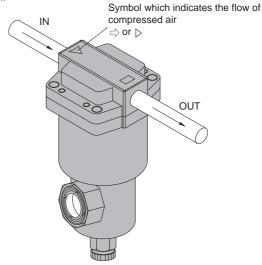

Piping

⚠ Caution

Connect it with IN and OUT ports in proper location. It does not work with the connection reversed.

In the case of the AFF2C to 22C, 37B, 75B, AM□150C to 550C, 650, 850

Verify the direction of the flow of the compressed air and the "\(\sigma\)" or "\(\sigma\)" mark that indicates the inlet of the product before connecting. It cannot be used if connected in the opposite direction.

2. Use an air blower to flush the piping before connecting the piping.

Use an air blower to thoroughly flush the piping, or wash the piping to remove any cutting chips, cutting oil, or debris from inside the piping before connecting them.

3. Wrapping of sealant tape

When screwing in the pipes or fittings, make sure to prevent cutting chips or the sealant material on the threaded portion of the pipe from entering the piping. If sealant tape is to be used, leave about 1.5 to 2 ridges of threads uncovered.

4. Modular connection

Mount the attached bracket on one side when connecting 2 sets.

Mount the attached brackets on both sides when connecting 3 sets or more.

As a guideline for the number of brackets, one bracket should be mounted for every 2 products.

Be sure to read this before handling. Refer to back page for Safety Instructions.

Air Supply

⚠ Caution

 The mist separator is not applicable to gases other than compressed air.

The mist separator is not applicable to gases other than compressed air (example: oxygen, hydrogen, flammable gas, mixed gas).

2. Do not use compressed air that contains chemicals, organic solvents, salt, or corrosive gases.

Do not use compressed gas containing chemicals, organic solvents, salt or corrosive gas. This can cause rust, damage to rubber and resin parts, or malfunction.

Operate within the specified operating pressure range.

Damage, failure, or malfunction may occur if the mist separator is operated above the maximum operating pressure. If the mist separator is used below the minimum operating pressure, increase in the air-flow resistance due to clogging will have such influence that the desired flow rate cannot be obtained.

If the mist separator is used under a low pressure such as for a blower, conduct sufficient tests by users to confirm the specifications and performances.

Operating Environment

- 1. Do not use in the following environments, as this can cause failure.
 - In locations having corrosive gases, organic solvents, and chemical solutions, or in locations where these elements are likely to adhere to the equipment.
 - In locations where salt water, water, or water vapor could come in contact with the equipment.
 - 3) In locations that is exposed to shocks and vibrations.
- 2. Be careful about the contamination of the workpieces due to entrainment of the ambient air.

If compressed air is used for air blow, compressed air blowing out from the blow nozzle may entrain foreign matter (solid particles and liquid particles) floating in the ambient air, blowing it against the workpieces and causing adhesion. Therefore, sufficient precautions must be taken about the ambient environment.

Maintenance

1. Replace the element immediately when the time for its replacement has arrived.

To replace the element, replace the O-ring and the gasket, too. For the replacement procedure, refer to the operating manual. (For element dimensions, refer to back page 6.)

<Element replacement timing>

gauge (Made to Order).

- a) AFF2C to 22C, 37B, 75B, AM□150C ~ 550C, 650, 850

 The replacement interval for the element is when the pressure drop reaches 0.1 MPa or after two years of operation, whichever comes first. A pressure drop can be verified with the element service indicator (-T) or with differential pressure
- b) AME

If the element has red spots, perform replacement even before the situation has not come to (a).

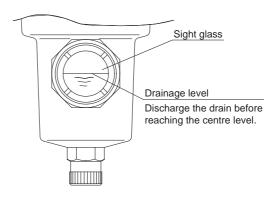

c) AM

If the secondary side smells of oil, perform replacement even before the situation has not come to (a).

2. Be sure to exhaust the drain accumulated in the filter container.

Failure to discharge the drain will allow the accumulated drain to flow over to the outlet side.

When using the AFF2C to 22C, 37B, 75B, AM□150C to 550C, 650, 850 with drain cock, drain guide or ball valve, discharge the drain before the drainage level reaches the centre of the sight glass. If the drain is not discharged properly, it will flow over to the outlet side.

Be sure to read this before handling. Refer to back page for Safety Instructions.

Maintenance

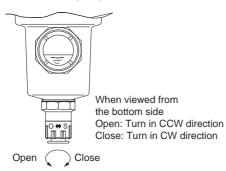

⚠ Caution

3. In the case of a type with auto drain

- The auto drain operates when the drain accumulates, and discharges the drain.
- When using the AFF2C to 22C, 37B, AM□150C to 550C, 650 with auto drain, the drain is automatically discharged with the knob tightened to the "S" side. Manual drain discharge, however, is also possible.

<Manual operation>

A manual knob attached to the auto drain end is tightened to the "S" side in normal operation. The drain can be discharged by loosening it to the "O" side. (Be careful, however, if pressure remains inside the filter when the drain is discharged, the drain will blow out from the drain port.)

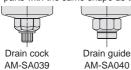

The drain exhaust parts replacement method and necessary parts are different depending on when it was manufactured.

	Necessary parts			
Descrip- tion	Manufactured Jan. 2010 or before [Manufacturing lot No. up to oo]	Manufactured Feb. 2010 onwards [Manufacturing lot No. oP to onwards] Note 2)	Applicable size	
Drain cock	Non-replaceable AM-SA039			
Drain guide	Non-replaceable	Thread type Rc: AM-SA040 Thread type G: AM-SA040-F Thread type NPT: AM-SA040-N	2C to 22C 150C to 550C 650 37B	
N.O. auto drain	Thread type Rc, G: AD43PA-D Thread type NPT: NAD43PA-D			
N.C. auto drain	Thread type Rc, G: AD53PA-D Thread type NPT: NAD53PA-D		2C to 22C 150C to 550C	
Ball valve AM-SA004 set		SA004		
N.O.auto drain Note 1)	Thread type Rc: AD34PA-D Thread type G: EAD34PA-D Thread type NPT: NAD34PA-D		75B, 850	

Note 1) Jig (AM-SA005) for replacing auto drain is necessary for the 75B or 850.

Note 2) When replacing parts with a production lot no. oP or after, order the parts with the same shape as the following figures.

5. The drain exhaust parts are different according to option or thread.

Applicable models: AFF2C to 22C, 37B, AM, AMD, AMH, AMG150C to 550C, 650

Others

1. Element interchange

Following is the element dimensions for the AFF and AM□ series:

Elements of the same body size have the same dimensions.

Element Dimensions

Model	Element dimensions (Reference value)	
	øA	В
AFF2C, AM□150C	49	42
AFF4C, AM□250C	58	52
AFF8C, AM□350C	70	78
AFF11C, AM□450C	82	88
AFF22C, AM□550C	96	118
AFF37B, AM□650	122	144
AFF75B, AM□850	142	223

2. About oil-free products

The AFF and AM□ series includes parts (such as resin parts, rubber parts, and elements) that does not allow degreasing wash. Therefore, oil-free products with all parts degreasing washed is not available.

3. Degreasing wash

Certain parts such as the body and housing can be degreased. Please contact SMC for further details after confirming the specifications.

(available as Option or Made to Order)

Be sure to read this before handling. Refer to back page for Safety Instructions.

Others

2. About oil-free products

The AFF and AM□ series includes parts (such as resin parts, rubber parts, and elements) that does not allow degreasing wash. Therefore, oil-free products with all parts degreasing washed is not available.

3. Degreasing wash

Certain parts such as the body and housing can be degreasing washed. Contact SMC after confirming the specifications. (available as Option or Made to Order)

4. Change of oil

On the AFF and AM series, no oil such as grease is applied to parts exposed to compressed air. However, for certain specifications, there are some parts to which oil is applied. It is possible to change the type of applied oil (as Option or Made to Order).

5. Internal volume of filter container

The product can be used as a small capacity air tank by removing the element. Following is the volume of filter containers of the AFF and AM \square series (when the element is removed).

Volume Inside Filter

Model	Volume inside filter (Reference value) (cm³)
AFF2C, AFF2B, AM150C, AM150 AMD150C, AMD150, AMH150C, AMH150	250

△ Safety Instructions

These safety instructions are intended to prevent hazardous situations and/or equipment damage. These instructions indicate the level of potential hazard with the labels of **"Caution," "Warning"** or **"Danger."** They are all important notes for safety and must be followed in addition to International Standards (ISO/IEC) ¹⁾, and other safety regulations.

Caution indicates a hazard with a low level of risk which, if not avoided, could result in minor or moderate

injury.

Warning indicates a hazard with a medium level of riskWarning: which, if not avoided, could result in death or serious

injury.

♠ Danger:

Danger indicates a hazard with a high level of risk which, if not avoided, will result in death or serious

injury.

ISO 4414: Pneumatic fluid power – General rules relating to systems.
 ISO 4413: Hydraulic fluid power – General rules relating to systems.
 IEC 60204-1: Safety of machinery – Electrical equipment of machines.
 (Part 1: General requirements)

ISO 10218-1: Manipulating industrial robots - Safety.

1. The compatibility of the product is the responsibility of the person who designs the equipment or decides its specifications.

Since the product specified here is used under various operating conditions, its compatibility with specific equipment must be decided by the person who designs the equipment or decides its specifications based on necessary analysis and test results. The expected performance and safety assurance of the equipment will be the responsibility of the person who has determined its compatibility with the product. This person should also continuously review all specifications of the product referring to its latest catalogue information, with a view to giving due consideration to any possibility of equipment failure when configuring the equipment.

2. Only personnel with appropriate training should operate machinery and equipment.

The product specified here may become unsafe if handled incorrectly. The assembly, operation and maintenance of machines or equipment including our products must be performed by an operator who is appropriately trained and experienced.

- Do not service or attempt to remove product and machinery/ equipment until safety is confirmed.
 - The inspection and maintenance of machinery/equipment should only be performed after measures to prevent falling or runaway of the driven objects have been confirmed.
 - When the product is to be removed, confirm that the safety measures as mentioned above are implemented and the power from any appropriate source is cut, and read and understand the specific product precautions of all relevant products carefully.
 - 3. Before machinery/equipment is restarted, take measures to prevent unexpected operation and malfunction.
- Contact SMC beforehand and take special consideration of safety measures if the product is to be used in any of the following conditions.
 - 1. Conditions and environments outside of the given specifications, or use outdoors or in a place exposed to direct sunlight.
 - 2. Installation on equipment in conjunction with atomic energy, railways, air navigation, space, shipping, vehicles, military, medical treatment, combustion and recreation, or equipment in contact with food and beverages, emergency stop circuits, clutch and brake circuits in press applications, safety equipment or other applications unsuitable for the standard specifications described in the product catalogue.
 - An application which could have negative effects on people, property, or animals requiring special safety analysis.
 - 4. Use in an interlock circuit, which requires the provision of double interlock for possible failure by using a mechanical protective function, and periodical checks to confirm proper operation.

∧ Caution

1. The product is provided for use in manufacturing industries.

The product herein described is basically provided for peaceful use in manufacturing industries.

If considering using the product in other industries, consult SMC beforehand and exchange specifications or a contract if necessary. If anything is unclear, contact your nearest sales branch.

Limited warranty and Disclaimer/Compliance Requirements

The product used is subject to the following "Limited warranty and Disclaimer" and "Compliance Requirements". Read and accept them before using the product.

Limited warranty and Disclaimer

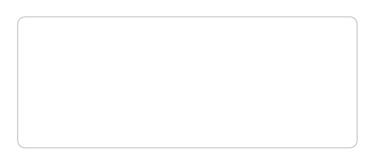

- The warranty period of the product is 1 year in service or 1.5 years after the product is delivered, whichever is first. ²⁾
 Also, the product may have specified durability, running distance or replacement parts. Please consult your nearest sales branch.
- 2. For any failure or damage reported within the warranty period which is clearly our responsibility, a replacement product or necessary parts will be provided. This limited warranty applies only to our product independently, and not to any other damage incurred due to the failure of the product.
- 3. Prior to using SMC products, please read and understand the warranty terms and disclaimers noted in the specified catalogue for the particular products.
- 2) Vacuum pads are excluded from this 1 year warranty. A vacuum pad is a consumable part, so it is warranted for a year after it is delivered. Also, even within the warranty period, the wear of a product due to the use of the vacuum pad or failure due to the deterioration of rubber material are not covered by the limited warranty.

Compliance Requirements

- The use of SMC products with production equipment for the manufacture of weapons of mass destruction (WMD) or any other weapon is strictly prohibited.
- The exports of SMC products or technology from one country to another are governed by the relevant security laws and regulations of the countries involved in the transaction. Prior to the shipment of a SMC product to another country, assure that all local rules governing that export are known and followed.

SMC products are not intended for use as instruments for legal metrology.

Measurement instruments that SMC manufactures or sells have not been qualified by type approval tests relevant to the metrology (measurement) laws of each country. Therefore, SMC products cannot be used for business or certification ordained by the metrology (measurement) laws of each country.
