**DuoPower.**  
The Duo of Power  
and Intelligence.

# Simply clever, the combination of two components guarantees even more performance.

# Advantages and functioning.

## Your advantages at a glance:

- The plug activates the optimum functional principle depending on the substrate. It expands in solid building materials, folds in perforated building materials and knots in panel building materials.
- Due to the two-component technology, the DuoPower has a higher expansion volume for a perfectly matched insertion and tightening torque.
- The nylon plug is suitable for all common building materials and thus enables universal use.
- The long version of the DuoPower is particularly suitable for fastening in perforated building materials, in aerated concrete and for bridging plaster.
- The large anchoring depths of the long version provide even more load-bearing capacity.
- The European Technical Assessment (ETA) for certain DuoPower dimensions guarantees tested safety for safety-relevant applications in concrete and masonry (see load table).

## Functioning

- The DuoPower is suitable for push-in and push-through installation.
- The red expansion wings support secure expansion and provide additional safety to the grey main body.
- The required screw length results from plug length + attachment thickness + screw diameter.
- The plug can be used with wood, chipboard and hanger bolts.
- For panel building materials, the threadless part of the screw must not be longer than the thickness of the attachment part.
- The fischer DuoPower ETA 10x50 with safety screw is approved for concrete and masonry. The DuoPower ETA 8x40 with PPF II and safety screw are approved for concrete.

Intelligent self-activating functions depending on the substrate.

Long versions with additional bite in problematic building materials.

## Features

ETA-22/0512, for multiple non-structural systems in concrete and masonry

# Substrates and installation.

## Recommendation

Suitable for concrete <sup>1)</sup>, solid brick <sup>2)</sup>, solid sand-lime brick <sup>2)</sup>, vertically perforated brick <sup>2)</sup>, hollow brick ceilings, perforated sand-lime brick, hollow block and solid block of lightweight concrete, aerated concrete, natural stone, plasterboard and gypsum fiberboard, solid gypsum board, gypsum board, chipboard.

- 1) Approved for DuoPower ETA 8x40 with safety screw and FPF II and DuoPower ETA 10x50 with safety screw
- 2) Approved for DuoPower ETA 10x50 with safety screw
